

Tables

2.1	Price instruments and policy objectives	44
2.2	Non-price instruments and policy objectives	48
3.1	Description of common scenarios	60
4.1	The structure of the welfare function	69
4.2	Optimal tax rules	76
4.3	Assumptions on the marginal cost of public funds	80
4.4	Price elasticities literature	82
4.5	Corresponding price elasticities	82
4.6	Different model versions	84
5.1	The structure of the welfare function	98
5.2	Overview of possible exercises	109
6.1	Dimensions of the spatial version of the TRENEN-Amsterdam model	127
6.2	Details of groups, OD pairs and numbers of routes per group	127
6.3	Characteristic equations from the network model for Amsterdam	128
6.4	Some parameter values for the simulation presented	129
6.5	Some simulation results of the linearised TRENEN-Amsterdam model	129
7.1	The marginal social costs of motorised road transport	137
7.2	The value of marginal time savings in passenger and freight transport in 2005	140
7.3	The marginal external congestion costs for Brussels and Belgium in 2005	140
7.4	The impacts of air pollutants considered by ExternE-Transport	142
7.5	Damage costs per g of pollutant	143
7.6	The use of the ExternE-Transport results in the case studies	143
7.7	The marginal external air pollution costs of passenger cars in Brussels in the reference equilibrium	144
7.8	The marginal external air pollution costs of interregional transport in Belgium in the reference equilibrium	145
7.9	The marginal external air pollution costs of urban public transport	145

7.10	The accident risks in the benchmark equilibrium	149
7.11	The pure economic costs of the different accident categories	149
7.12	The marginal external accident costs of transport in Brussels and Belgium in the initial equilibrium	150
7.13	Marginal external noise cost in Brussels in 2005	153
7.14	General overview of the marginal external costs in the initial equilibrium in Brussels and Belgium	154
7A.1	The time–flow relationship	160
7A.2	Damage estimates for a gasoline passenger car in different locations	161
7A.3	Average emission factors of a gasoline car in g/vkm	162
7A.4	ExternE emissions for urban and interregional passenger car traffic	163
7A.5	Auto-Oil I emission reductions for 1996–2010	164
7A.6	Fuel consumption with standard and improved fuel efficiency	164
7A.7	The emission factors for gasoline cars – urban case studies	165
7A.8	The emission factors for diesel cars – urban case studies	166
7A.9	The emission factors for interregional public passenger transport	167
7A.10	The emission factors for interregional freight transport	167
7A.11	The marginal external costs in the initial equilibrium – Amsterdam	168
7A.12	The marginal external costs in the initial equilibrium – Dublin	168
7A.13	The marginal external costs in the initial equilibrium – London	169
7A.14	The marginal external costs in the initial equilibrium – Ireland	169
8.1	Estimates of the marginal and average accident risk	178
10.1	Functional forms tested in selection of unit time–flow relationship for TRENEN	197
10.2	Summary statistics derived from non-linear curve-fitting routine	198
10.3	Network parameters for Dublin and Dubai	201
11.1	Characterisation of the reference situation	220
11.2	Key results of optimal policy	225
11.3a	Taxes in reference situation and optimal pricing	227
11.3b	Generalised prices for reference and optimal pricing	228
11.3c	Generalised prices in reference and optimal pricing	228

11.4	Changes in consumer surpluses for two scenarios	232
11.5	Money price changes of a vehicle kilometre caused by fuel price increases	233
11.6	Emission reductions	235
11.7	Main components of welfare	235
11.8a	Key results of counterfactual equilibria, reference parking charges, reference technology	236
11.8b	Key results of counterfactual equilibria, improved parking charges, reference technology	236
11A.1	Characterisation of optimal pricing, improved parking charges	240
11A.2	Characterisation of cordon pricing, reference parking charges	241
11A.3	Characterisation of uniform pricing, reference parking charges	242
11A.4	Characterisation of improved parking charges	243
12.1a	Consumer price in Euros per vehicle-km	253
12.1b	Price per litre fuel in Euros	253
12.1c	Money price public transport per passenger-km in Euros	254
12.1d	Resource vehicle costs, net of tax, in Euros per car-km	254
12.1e	Resource cost in Euros per litre fuel	254
12.1f	Total resource cost in Euros per vehicle-km	255
12.1g	The proportions in which the vehicle fleet types are used	255
12.1h	Average occupancy rate in persons per vehicle in public transport	256
12.1i	The demand in passenger-km per representative individual per day	256
12.1j	(Cross-) price elasticities	256
12.2	Characterisation of the reference situation	259
12.3	Key results of optimal policy compared with reference situation	262
12.4a	Taxes in reference situation and optimal pricing	263
12.4b	Generalised prices in reference situation and optimal pricing	263
12.4c	Composition of generalised prices in reference and optimal pricing for a small petrol car driven alone by an inhabitant not paying for parking	264
12.5	Percentage changes in consumer surpluses for two scenarios	266
12.6a	Key results of counterfactual equilibria, reference parking charges, reference technology	267

12.6b	Key results of counterfactual equilibria, reference parking charges, regulation of technology	267
12.6c	Key results of counterfactual equilibria, improved parking charges, reference technology	268
12.6d	Key results of counterfactual equilibria, improved parking charges, regulation of technology	268
12A.1	Average trip length 1995 TRENEN zones in kms: public transport	270
12A.2	Average trip length 1995 TRENEN zones in kms: bicycle	271
12A.3	Average trip length 1995 TRENEN zones in kms: car	271
12A.4	Kilometrage 1995 TRENEN zones: public transport	271
12A.5	Kilometrage 1995 TRENEN zones: bicycle	271
12A.6	Kilometrage 1995 TRENEN zones: car	271
12A.7	Average trip duration 1995 TRENEN zones in minutes: public transport	272
12A.8	Average trip duration 1995 TRENEN zones in minutes: bicycle	272
12A.9	Average trip duration 1995 TRENEN zones in minutes: car	272
12A.10	Characterisation of the full optimum (FO) with improved parking charges and standard emission technologies	273
12A.11	Characterisation of the cordon pricing (CO) with reference to parking charges and standard emission technologies	274
13.1	Values of time used in DTI study	280
13.2	Resource costs for bus and rail	282
13.3	Resource costs, prices, taxes and external costs in the reference situation	284
13.4	Naming convention for option tests	285
13.5	Key results from the full optimum pricing scenario	286
13.6	Taxes in reference and full optimum scenarios	286
13.7	Sensitivity tests for the 2005 TRENEN model	287
13.8	Reference passenger-kilometres demanded over total population	288
13.9	Percentage reference market share of transport quantities demanded	288
13.10	Full optimum passenger-kilometres demanded over total population	290
13.11	Percentage full optimum market share of transport quantities demanded	290
13.12	Comparison of taxes in sensitivity tests	291
13.13	Comparison of money price in sensitivity tests	292
13.14	Percentage change in overall results w.r.t. reference scenario	293

14.1	Comparison of full optimum with reference case	315
14.2	Comparison of cordon pricing with reference case	317
14.3	Comparison of uniform pricing with reference case	317
14.4	Welfare changes from varying technology and parking charges	318
14.5	Key results of counterfactual equilibria	320
14A.1	Characterisation of the reference situation	323
14A.2	Characterisation of the full optimum situation	324
14A.3	Characterisation of the cordon pricing situation	325
14A.4	Characterisation of the uniform pricing (1) situation	326
14A.5	Characterisation of the uniform pricing (2) situation	327
15.1	Marginal external costs in the reference situation	341
15.2a	Price elasticities passenger transport	342
15.2b	Price elasticities freight transport	342
15.3	Characterisation of the reference situation	344
15.4	Taxes and marginal external costs in the full federal optimum	347
15.5a	Key results of the full federal optimum: total demands	349
15.5b	Key results of the full federal optimum: composition of demands	349
15.5c	Technology choice and welfare components of the full federal optimum	350
15.5d	Percentage increase of fuel prices w.r.t. reference situation	350
15.6	Prices and price increases in the 'uniform pricing' (UP) scenario	352
15.7	Optimal toll on highways	354
15.8	Congestion pricing (CP): public transport prices	355
15.9	Comparison of welfare effects of the different scenarios	357
15.10	Taxes and local marginal external costs in the Nash equilibrium, no price discrimination	361
15A.1	Uniform pricing scenario: total demands	364
15A.2a	Uniform pricing scenario: demand composition passengers	364
15A.2b	Uniform pricing scenario: demand composition freight	365
15A.3	Uniform pricing scenario: welfare effects	366
15A.4	Congestion pricing scenario: total demands	367
15A.5a	Congestion pricing scenario: demand composition passengers	367
15A.5b	Congestion pricing scenario: demand composition freight	368
15A.6	Congestion pricing scenario: welfare effects	368
15A.7	Nash equilibrium scenario: total demands	369
15A.8a	Nash equilibrium scenario: demand composition passengers	369

15A.8b	Nash equilibrium scenario: demand composition freight	369
15A.9	Nash equilibrium scenario: technology choice and welfare components	370
16.1	Transport flows and modal shares, reference situation	375
16.2	Prices, taxes and marginal external costs in the reference situation	377
16.3	Taxes and marginal external cost in full optimum for 2005	379
16.4	Modal shares in the reference (RF) and the full optimum (FO)	380
16.5	Some other key results of the optimal policy	381
16.6	Technology choice and welfare components	381
16.7	Speeds and tax revenues	381
16.8	Taxes and marginal external costs for policies	383
16.9	Key results of policy without time-differentiated policy	384
16.10	Market share for each mode type	384
16.11	Technology choice and welfare components	384
16.12	Key results of policies	386
17.1	Characteristics of the areas studied	392
17.2	Prices, taxes and costs for the urban case studies in the full optimum scenario	402
17.3	Prices, taxes and costs for the interregional case studies in the full optimum scenario	404
17.4	Total volume and composition of traffic	405
17.5	Speeds	405
17.6	Prices, taxes and costs	406
17.7	Volumes, composition of traffic and speeds	406
17.8	Welfare, total external costs and tax revenues	408
