

List of figures

2.1	The evolution of potential output, and the effect of an increase in the capital–labour ratio in the Solow growth model	20
2.2	The effect on the evolution of potential output of an exogenous change in the rate of labour augmenting technical progress	21
2.3	The relationship between potential and actual output	23
2.4	Alternative paths of potential output in an endogenous growth model	27
2.5	The link between demand conditions and output growth in a fundamentalist Keynesian model with endogenous growth	31
2.6	Determination of the equilibrium rate of growth in a fundamentalist Keynesian growth model in which the growth of demand affects investment spending and technical progress	33
2.7	The effect of an increase in the level of demand on the equilibrium rate of growth in a fundamentalist Keynesian endogenous growth model	35
4.1	Real GDP and real investment	56
4.2	Real GDP and real government spending	57
4.3	Real GDP and real exports	57
4.4	Real GDP and real M2 money supply	58
5.1	The Golden Age growth episode	73
5.2	The Golden Age and Age of Decline growth episodes compared	76
5.3	The 1990s boom – the start of a neoliberal growth episode?	79
6.1	The balance-of-payments equilibrium growth rate when ϵ/π changes endogenously	102
7.1	Equilibrium growth with a strictly concave supply growth function	117
7.2	Equilibrium growth with a quasi-concave supply growth function	118
7.3	The Cornwall (1972) model, with a region of correspondence between supply and demand growth	119
7.4	The inconsistency between the BOP-constrained growth rate and the capacity balance growth rate	122
10.1	Reconciliation of the target rate of return assessed by firms and the actual rate of profit	182

10.2	Adjustment to long-run equilibrium following a change in demand conditions	183
10.3	Adjustment to long-run equilibrium following a change in cost conditions	185
11.1	Conflicting-claims profit shares and inflation	194
11.2	Equilibrium positions in the FS/GFS and GWS cases	200
A.11.3	The stagnationist case: one stable excess capacity equilibrium	208
A.11.4	The stagnationist case: multiple equilibria	209
14.1	The Cambridge growth model	254
14.2	The changing composition of employment in the US, 1840–1995	259
14.3	The determination of equilibrium growth and real wages	262
14.4	The impact of increasing real wages and labour-saving technical change	264
14.5	Economic development and its impact on the ratio of government spending to income	268
15.1	Dualism	280
