Nicola Bellini is Associate Professor of Business Economics at the St Anna School of Advanced Studies in Pisa (Italy), where he graduated in Political Science. He holds an MA degree from the School of Advanced International Studies of Johns Hopkins University (USA). From 1982 to 1990 he was research fellow at the economic research institute Nomisma in Bologna. Later he was adviser for economic policy and planning in the Office of the President of the Region Emilia Romagna. He was also visiting professor at the Stanford University center in Florence and at the University of Sassari. His research work and publications focus on the industry–State relationship and on the analysis, design and evaluation of industrial policies, especially at the regional and local level.

Jaime Alberto Camacho is Professor at the School of Business Administration in the Industrial University of Santander (Bucaramanga, Colombia), where he obtained a Diploma in Industrial Engineering, a master’s degree in Computer Science, and a PhD in Production Management. He is also a PhD candidate in Industrial Engineering at the Polytechnical University of Catalonia, Barcelona, where he currently works with the Research Team on Economics of Technological Change and Technology Management. Since 1987 he has been doing research and has published in the field of innovation and technology management, especially on university–industry links, national innovation systems, technology business incubators and science and technology parks.

Mercedes Inés Carazo is Professor on the Master of Technological Management in the National University of Engineering, UNI (Lima, Peru) and international consultant for several organizations. She has a diploma in Physics from the University of Buenos Aires and a master’s degree in Economics from the Graduate School Center ‘Centro de Investigación y Docencia Económica, CIDE’ (Mexico, DF). Since 1984 she has been doing research and publishing mainly in the fields of SMEs and employment, technology transfer, university–industry links and national innovation systems. In 1982 she founded UNITEC C&T, a center for technology transfer and university–industry services in the UNI. Since 1994 she has been working at the Ministry of Industry, Tourism, Integration and International Trade of Peru (MITINCI).
in the field of innovation and technology management with emphasis on SMEs. She is the President of the Board of CITEccal, centre of technological innovation in leather and shoemaking. She is now the coordinator of the Innovation Centres Network in Peru MITINCI/AECI Programme in Peru.

**Mario Cimoli** has been Professor of Economics at the University of Venice (Ca Foscari) since 1990 and is currently Economic Affairs Officer at ECLAC (Economic Commission for Latin America and the Caribbean) of the United Nations. He obtained a PhD at the Science Policy Research Unit (SPRU), University of Sussex and he has held a number of visiting appointments in different universities and institutions (Udine University, UAM and CONACYT in Mexico). He has published many papers and books, including: *Developing Innovation Systems: Mexico in the Global Context* (Pinter Publishers, 2000), *Technology, Growth and Development* (with J. De la Mothe, Pinter Publishers, 2000), ‘Technological paradigms, patterns of learning and development: an introductory roadmap’ (with G. Dosi in *Journal of Evolutionary Economics*, 1995), ‘A generalized technology gap trade model’ (with L. Soete in *Economie Appliquée*, 1992), ‘Technological gaps and institutional asymmetries in a North–South model with a continuum of goods’ (*Metroeconomica*, 1988).

**Roberto Constantino** has been Associate Professor in the Economics Department at the Metropolitan Autonomous University in Mexico since 1992. He also has been Director of the Faculty of Economics and a member of the academic staff of the Advanced Program on Economics and Management of Technological Change. Since 1997 he has been designated honorarium member of the Academic Board of Advisors for Latin American Technological Affairs at Mexico’s National Council of Science and Technology. He has published various papers on topics regarding technical and institutional change linked with the environmental impacts of the industrial path. Currently he holds the position of Academic Secretary at the Metropolitan Autonomous University and is the editor of the *Journal of Economics* at the same institution. He held a fellowship at the Science and Technology Policy Institute in South Korea.

**Carlos M. Correa** is Director of the Master Program on Science and Technology Policy and Management at the University of Buenos Aires, where he also teaches international trade and intellectual property. He has been visiting professor at several postgraduate courses in Europe and Latin America and consultant to UNCTAD, UNIDO, WHO, FAO, Interamerican Development Bank, INTAL, World Bank, SELA, ECLA, and other regional and international organizations. He has been director of several research projects in Argentina and Latin America, including research funded by the International
Development Research Centre (Canada) on information technologies and biotechnology. He was also Director of the UNDP/UNIDO Regional Programme on Information Technology and Microelectronics for Latin America and the Caribbean (1990–95). In addition to his academic work, he has served in his country as Undersecretary of State for Information Technology and Development (1984–89), and has been a delegate in international negotiations on intellectual property (including during the Uruguay Round of GATT). He is the author of several books and articles on technology and intellectual property published in national and foreign journals.

**Pere Escorsa** is Professor of the Department of Business Administration of the Polytechnical University of Catalonia in Terrassa (Barcelona), Spain. Usually he works in technological innovation and technology management, industrial and technological policy, regional development, and advanced services for firms. He is also Director of the Research Team on Economics of Technological Change and Technology Management of the Polytechnical University of Catalonia and General Manager of IALE Tecnología, a consulting firm in innovation and technology management also located in Terrassa. IALE works mainly in technology watch/competitive intelligence. In 1981 he founded ECOTECNIA, a leading company in windmills. In the period 1995–97 he was director of ALTEC (Latin American Association of Technology Management).

**Isaías Flit** has a professional training in Engineering and in the Management of Science and Technology for Development, and holds academic degrees from the National Engineering University of Peru (UNI), the University of Florida, and MIT. He has extensive experience (at managerial and operational levels) in private enterprises, international institutions, and governmental and non-governmental organizations, as well as in international consulting. He is a Professor in the graduate program of the Mechanical Engineering School in UNI. At present he is the coordinator for the MITINCI/AECI Technological Innovation Program in Peru. He is a member of the highest jurisdictional body for intellectual property matters in Peru (INDECOPI), and of the Board of Directors of the National Science and Technology Council of Peru (CONCYTEC). He is listed as one of the top 100 experts in Science and Technology in Latin America. He is the author of several articles on technology, development and management.

**Angel Hurtado** is a consultant with the Technological Innovation Program at the Ministry of Industry, Tourism, Integration and International Trade, Peru. He is Professor of the Management of Technology at the Industrial and Systems Engineering School of the National University of Engineering (UNI).
in Lima, Peru. He is an Industrial Engineer and has completed postgraduate studies in Enterprise Technological Management at the UNI.

**Tony Kinder** is a researcher at the Technology Management and Policy Programme (TechMaPP) research centre in the Business Studies Department of the University of Edinburgh where he is in the final stages of PhD research. During fifteen years as a local councillor he has helped make and implement local economic development strategies. His research interests include the diffusion of lean production and innovation of telematics into public administration. He is conducting a series of sociotechnical constituency approach studies on innovation in West Lothian, Scotland.

**Roberto E. López-Martínez** is currently a researcher at the Institute of Engineering of the National University of Mexico and visiting lecturer of science and technology policy at the Metropolitan University of Mexico City. He is an Industrial Designer from the Universidad Iberoamericana and obtained an MSc in Technical Change and Industrial Strategy at the University of Manchester. From 1979 to 1985 he founded and directed a multidisciplinary master’s degree programme in Product Development at the Metropolitan University of Mexico City. He has been Vice-Principal of the Center for Technological Innovation and Executive Liaison Officer of the Institute of Engineering, both at the National University of Mexico. He has published several articles and contributions for books on management of technology and science and technology policy. He has carried out diverse consulting activities for universities, as well as for public and private organizations in Mexico and Latin America.

**Blanca Esther Martín** is a microbiological researcher who has worked in science organizations for 15 years. She gained a degree in Microbiology in 1978 in the University of Havana and an MSc in Organizational Development and Consultancy in 1997, in the Cuban Center for Economic Studies at Havana University. She has worked in the Scientific and Technological Policy Division since 1996. In these years she has participated in several seminars and courses on science policy and the relation between industrial and academic sectors.

**Mirta Michilli** is the co-ordinator of the Telecities Office, Municipality of Rome, and of the Rome’s Presidency of the Telecities network. She is also project coordinator of the Global Junior Challenge, an innovative project for the dissemination of IT technology in youth generation promoted by the City of Rome. From 1995 to 1998 she was co-founder and co-ordinator of the Eurolaboratorio of the City of Rome. This new innovative department aims to
foster the introduction of new Information and Telecommunications Technologies within the Public Administration and throughout the City of Rome, promoting actions led by the City and involving private and public actors. Mirta is also director of European Information Brokerage Services (EIBS), a small consultancy company operating in the field of information technology projects. As part of EIBS she has been the quality assurance manager of the Global Inventory Project (GIP).

Alfonso Molina is Professor of Technology Strategy and the Director of the Technology Management and Policy Programme (TechMaPP) of the University of Edinburgh. He was born in Chile where he trained as an electronic engineer at the University of Chile. He came to Britain and obtained an MPhil in Electronic Engineering, University of Bradford. He shifted from engineering to social studies of technology and completed a doctorate at the Science Studies Unit, The University of Edinburgh. His research interests center on theories of innovation and technology management and strategy, particularly on his original sociotechnical constituencies approach, now widely applied to understand and inform the strategic development of a variety of information and communication technologies. A particular interest has been to transform this academic theorization into instruments of practical application for government and company technology strategies. These include ‘evolving business plans’, ‘customized user research’, and ‘trend-mapping’. Alfonso has worked on numerous occasions as consultant, evaluator, reviewer and rapporteur for various directorates of the European Community, and has been member of various international juries, including present Chairman of the international jury for the Stockholm Challenge Award.

Andrea Piccaluga is Associate Professor in Business Administration at the University of Lecce and researcher at the Laboratory of Economics and Management at Scuola Superiore Sant’Anna in Pisa. He has a degree in Economics from the University of Pisa; an MSc in Technology and Innovation Management from the Science Policy Research Unit (SPRU) of the University of Sussex in Brighton and a PhD from the Scuola Superiore Sant’Anna in Pisa. His research activity is concerned with innovative processes in large organizations, the management of R&D activities in public and private laboratories, and knowledge-based regional economic development. At present he is working on several research projects in collaboration with private companies (Piaggio, CSELT, Fiat Research Centre), the Regional Government of Tuscany, the Italian Ministry of University and Scientific Research, and with several Italian and foreign universities.
Alma Rocha-Lackiz was trained in Biochemical Engineering and after obtaining a DEA in Industrial Organisation, Innovation and International Strategies in Paris XIII she worked as research assistant at the Centre for Technological Innovation at the National University of Mexico. She has recently obtained a master’s degree in Economics of Technical Change, studying Mexican science and technology policy. At present, she collaborates in several consulting and research projects and in the Liaison Office of the Institute of Engineering at the National University of Mexico.

Leonardo de la Rosa is a researcher at the Scientific and Technological Policy Division of the Ministry of Science, Technology and Environment in La Hebana, Cuba. He attained a PhD in Technical Sciences in January 1983 (Mariory Institute of Transportation of Moscow), and an MSc in Management, July 1995 (Politechnic Institute ‘José Antonio Echevarría’ of Havana, Cuba). He has contributed to several studies and has organized some national and international courses in technology transfer. He has been a researcher at the Technological Development Centre LEIA, in the Basque Community, Spain since 1996. He worked for a year as a counsellor in Technological Management in Cear, Brazil (September 1998–99).
