

## Tables

---

2.1	Location of R&D facilities in the new telecommunications industry, 1999	23
2.2	Energis employment by function	25
2.3	Capitalization for selected late entrants, incumbents and technology companies	27
2.4	Evolution of the Internet	30
2.5	Info-communications industry layers	32
2.6	Diffusion of second-generation mobile systems by region	34
2.7	Competing networks and technology in local access markets	35
3.1	Cellular mobile competition in the OECD, 2000	51
3.2	ISDN subscription	60
8.1	Issues and their impact on GTE Sprint	140
11.1	Indicators of international telecommunications, 1988 and 1998	201
13.1	Old and new concerns relating to the development divide	243
14.1	Peruvian telecommunications pre- and post-privatization	254
14.2	Overview of WBG information infrastructure operations, 1992–2000	255
15.1	Composition of scheduled commitments by service category	274
18.1	Important telecommunications policy events prior to privatization	321
18.2	Selected indicators for Telebrás, 1972–98	323
18.3	Households with fixed telephone lines, 1992–99	325
18.4	Telebrás system kilometres of fibre-optic cable	326
18.5	Telebrás system R&D intensity	327
18.6	Telebrás system technical efficiency for local telephone companies (VRS)	329
18.7	Post-privatization events and policy	331
18.8	Fixed exchange services in Brazil at September 2000	333
18.9	Mobile cellular services in Brazil at September 2000	333
18.10	Telephone penetration and installation charges	334
18.11	Universal access targets and achievement in switched exchange service	335
18.12	Service quality targets and achievement in fixed telephony	336
18.13	Cellular service targets and achievement at August 2000	337

18.14	Number of complaints in Brazilian telephony	339
20.1	Market organization	362
20.2	Average interconnection rates, 1998–2001	369
20.3	Regulator responsibility	374
20.4	Cost of the universal service	377
21.1	The regulatory approach of the new German telecommunications law	390
21.2	Disaggregated regulatory approach	395
