Tables

1  Technical change and employment: a reversed relationship?  
1.1 Short (Juglar) business cycles in long (Kondratieff) waves  
1.2 Unemployment levels in selected countries, 1980s and 1995  
1.3 Exports of ICT equipment to major OECD countries, as a percentage share of total manufacturing exports to those countries, from selected countries  
1.4 Patents taken out in the United States by various countries and regions, 1977–96  
2A.1 Relationships between per capita real GDP and the rate of investment  
2A.2 Relationships between per capita real GDP and the rate of investment in producer durables  
2A.3 Relationships between total R&D intensity and aggregate GDP  
2A.4 Relationships between total R&D intensity and rate of investment  
2A.5 Relationships between total R&D intensity and rate of investment in producer durables  
2A.6 Relationships between higher-education R&D intensity and aggregate GDP  
2A.7 Relationships between per capita patents and per capita GDP  
2A.8 Relationships between per capita patents and rate of investment  
2B.1 Unit root tests on R&D intensity, patents, GDP and rate of investment  
2C.1 Results from the key variables  
2C.2 Summary of panel data two-period estimates  
2D.1 Results of ECM panel data regressions, abstracted  
3.1 Labour market characteristics in Europe, the USA and Japan  
3.2 ‘Good’ jobs and ‘bad’ jobs, by sector and country  
3.3 Three interdependent structural changes  
3.4 The three structural changes show up at various levels  
4.1 Ratios of services to manufacturing in the institutional division and in the final product concept
4.2 OLS estimates of the effects of structural dynamics of demand on employment and final product employment 118
4.3 Share of intermediate goods and own value added in gross output 119
4.4 Productivity and employment changes (both final product and industry concepts), USA, 1972–90 122
4.5 Productivity and employment changes (both final product and industry concepts), Germany, 1978–90 123
4.6 Productivity and employment changes (both final product and industry concepts), Japan, 1970–90 124
4.7 Productivity and employment changes (both final product and industry concepts), France, 1972–90 125
5.1 Main variables from the European Community Innovation Survey, country averages 152
5.2 Regression estimates 155
5.3 Performance of product and process innovation-based industries 159
6.1 Tertiarization: the rise of business services in recent decades 184
6.2 Employment ratios by NACE sectors 189
7.1 ISIC classification 212
7.2 Results of spline regressions, sector 3 226
7.3 Results of spline regressions, sector 9 228
7.4 Summary of spline regressions 230
7.5 Sectoral growth and unemployment (single regressions) 233
7.6 Sectoral growth and unemployment (joint regressions) 234
7A.1 Equilibrium structure of output and employment 241
7A.2 Equilibrium structure of output and employment with redistribution 244
7A.3 Effects of technical change and redistribution 247
7B.1 Country and sector-specific dynamics of change 252
9.1 A parametric characterization of the MoOs 305
11.1 Sectors with correct expected signs 364
11.2 Relative importance of explanatory variables in explaining per country wage growth 364
11.3a Growth rates of explanatory and dependent variables over the estimation period given by sample (SMPL) 365
11.3b Growth rates of explanatory and dependent variables over the estimation period given by SMPL, 1980s onwards 366
11.4a Relative importance of dependent and explanatory variables in explaining per sector wage growth 367
11.4b Relative importance of dependent and explanatory variables in explaining per sector wage growth, 1980s onwards 368
11.5 Sectors with correct expected signs when the roles of labour and wages are interchanged

11.6 Relative importance of explanatory variables in explaining per country wage growth

11.7a Growth rates of explanatory and dependent variables over the estimation period given by SMPL

11.7b Growth rates of explanatory and dependent variables over the estimation period given by SMPL, 1980s onwards

11.8a Relative importance of dependent and explanatory variables in explaining per sector labour growth

11.8b Relative importance of dependent and explanatory variables in explaining per sector labour growth, 1980s onwards

11.9a Growth rates of explanatory and dependent variables over the estimation period given by SMPL

11.9b Growth rates of explanatory and dependent variables over the estimation period given by SMPL, 1980s onwards

11.10a Relative importance of dependent and explanatory variables in explaining per sector wage growth

11.10b Relative importance of dependent and explanatory variables in explaining per sector wage growth, 1980s onwards

11.11a Growth rates of explanatory and dependent variables over the estimation period given by SMPL

11.11b Growth rates of explanatory and dependent variables over the estimation period given by SMPL, 1980s onwards

11.12a Relative importance of dependent and explanatory variables in explaining per sector labour growth

11.12b Relative importance of dependent and explanatory variables in explaining per sector labour growth, 1980s onwards

11.13 Sectors that have adverse effects from trade and decreasing wage growth

11A.1 Sector classification and abbreviations

11A.2 Country codes

13.1 Long-run changes in total working time, average working time and employment

13.2 Average annual changes in hourly productivity and in average working time, 1960–95

13.3 Distribution of the average annual growth rate in hourly wage between wage per employed person and average working time, 1960–95

13.4 Overtime hours and part-time working, 1983–94

13.5 Percentage of full-time dependent employees working most frequent usual weekly hours (mode), 1985 and 1995
