## Figures

3.1 Annual daily mean concentrations of PM$_{10}$.................. 57
5.1 Location of sample catchments in the Galloway fishery...... 102
5.2 Predicted market value of the Galloway salmon fishery under alternative abatement scenarios........ 104
5.3 Description of environmental change (with certainty): option B...... 107
6.1 The weak sustainability view........................................ 119
6.2 Critical loads for surface water in Norway......................... 123
6.3 Exceedance of critical loads from sulphur and nitrogen in surface water in 1990 and 2010........ 124
6.4 Probability of fish damages by class................................ 127
6.5 Predicted damages to fish stocks from exceedance of critical loads for sulphur and nitrogen in surface water in Norway in 1990 and 2010.............................. 130
7.1 The contaminated land remediation programme...................... 144
7.2 Integrating benefits with risk assessment.......................... 147
7.3 The Szíkgát site, Debrecen............................................. 148
7.4 Location of Szíkgát to survey sampling sites in the Debrecen area.... 152
8.1 Rankings of options given by the NAIADE method.................... 175
8.2 Comparison between the first and second options in the ranking .... 175
8.3 Comparison between the second and third options in the ranking.... 176
9.1 Supply of nitrogen from livestock manure in the EU............... 183
10.1 The links between hazard, risk, impact and social cost.............. 196
10.2 Hazard indicator components.......................................... 207
