Valdés, A. 118
value added tax 114, 115, 116
value categories 84–5
value of life years 63–9, 75
and age 68–9
derived from value of statistical life
64–7
derived from willingness to pay
experiments 67–8
health impacts 103
lost 98–9
value of a statistical life 49–75, 91–9
age dependence 96–7
age-dependent mortality, ill health
and latency effects 96
economic valuation and resource
allocation 49–52
health impacts 85, 90, 91, 97–8, 99,
103, 104
health valuation studies in Brazil 74
latency impacts 98
others’ valuation of risks to an
individual 69–71
probability ranges 96
trade-off view: economics 52–3
unequal income 72–4
validity of different methods of
estimation 93–5
value of life years 63–9
value of life years lost 98–9
valuing future lives 71–2
valuing mortality risks: avertive
behaviour 56–7
valuing mortality risks: contingent
valuation method 57–8
valuing mortality risks: human capital
approach 59–60
valuing mortality risks: wage risk
models 55–6
voluntary and involuntary risk 95–6
willingness to pay versus willingness
to accept 60–62
