List of tables

4.6 Office workers’ experience of the effect of telecommunications on work-related trips to different destinations according to travel mode 69
4.7 Share of the device diminishing work-related trips, according to building type, gender and work position 70
5.1 Mobility indicators for Belgium 82
5.2 Mobility indicators for Brussels 83
5.3 Penetration level of telecommuting/teleworking in Belgium 90
5.4 Calculation of the parameter values for Belgium 93
5.5 Forecast of the penetration of telecommuting/teleworking in Belgium 94
5.6 Trends in occupations in the Brussels Capital Region 96
5.7 Trends in occupations in Belgium 96
5.8 Shift–share analysis of the growth in occupations suited for telecommuting/teleworking 97
5.9 Forecast of the penetration level in the Brussels Capital Region based on the shift–share approach 98
5.10 Reduction in trips caused by implementation of telecommuting/teleworking in Belgium 103
5.11 Reduction in trips caused by implementation of telecommuting/teleworking in Brussels Capital Region 104
6.1 Description of the variables 114
6.2 MLE parameter estimates of the two rate period equations 115
6.3 Duration of phone calls when independent variables vary by 1 per cent 116
6.4 Impact of contact network on average dependent variable level 117
6.5 Endowment impact on average dependent variable level 117
6.6 Socio-demographic impact on average dependent variable level 117
7.1 Long-term elasticities of demand with respect to time and costs of car and public transport respectively 129
7.2 Passenger transport per mode, 1998 130
7.3 Door-to-door travel time ratio by distance class with shares of car trips and PT modal shares 131
7.4 Emission factors of car and train, the Netherlands, 1995 134
7.5 Indicative CO₂ and NOₓ emission figures of road and barge transport relative to rail for the medium-distance markets of bulk and intermodal container transport, 2010 138
8.1 Road quality rated by international business panel 159
8.2 Percentage of main network links exhibiting a congestion duration of a certain number of hours 161
List of tables

8.3 Key roadway and mobility parameters for the Randstad, the Ruhr area and Flanders 163
8.4 Share of car commuters who experience congestion on their work trip and average commuting time of car commuters 165
9.1 Geographical patterns of traffic flows related to local mobility in France 183
9.2 Maximum avoidable car traffic through traffic-calming measures 186
9.3 Co₂ emissions for transport and travel behaviour in Ile-de-France in relation to density of municipality of residence 190
9.4 Road traffic and exhaust emissions, France 190
9.5 Travel characteristics and shares in the family budgets of housing and travel expenses in relation to area of residence 192
10.1 Variables used in the CA/SP tasks 200
10.2 Response behaviour 203
10.3 CA: results for the car attributes by purpose 207
10.4 CA: results for the public transport attributes by purpose 208
10.5 CA: results for the bicycle attributes by purpose 209
10.6 SP/RP: results for the modal attributes 210
10.7 SP/RP: relative valuations 213
11.1 Characteristics of change in activity behaviour 225
11.2 Thresholds of activity behaviour by gender 226
12.1 A simplified example of a household weekly agenda 242
12.2 Potential explanatory variables in the momentaneous priority model 244
13.1 Assignment in the scenario of new dwelling and job location zones after office transfer 271
13.2 Kilometrage commuting traffic per scenario (2015) 273
13A.1 Model for reaction type 280
13A.2 Model for the probability of moving to another residential area for employees who change dwelling but not job 281
