see also scientific reputation

research
government influence 393–4
infrastructures, US and Europe 170
networks, enthusiasm for 396–9
projects see new projects; project completion
quality, measuring 242
societal needs 16
spillover benefits 385
and teaching
Humboldt social contract 8
restructuring link between 5, 81–3
separation of 8, 24
symbiosis 17–18
v. third mission 18–19
see also academic research; confined research; interdisciplinary research; public research
research centres 85, 164
research collectives 44–7
research and development (R&D)
concentrated private, France 149
growing costs 11
see also industrial R&D survey
research findings, and technical advances 119, 120–21, 122
research productivity
allocation of funds 239–40
estimation, B&B programme
assumptions 214–17
parametric estimations 217–23
semi-parametric estimations 223–8
research programmes
large, France 149, 151
sponsored by EC 261
research units
resource allocation study 207
self-organization into coalitions 254–5
research in the wild
collaboration with confined research 32, 38–54, 62–3
entry points, concerned groups 55
research-only institutes 17, 23
researchers
absorptive capabilities 78–9
duty to indicate doubts about research 61–2
opportunities for, France 154–6
withdrawal of 36–7
resource allocation
B&B funding programme study 202–30
research coalition networks 251–86
value for money 239–40
retrenchment, expansion of science 4
revised social contract 12–13
Rhône-Poulenc Rorer 186–7

scholarship 14
*Science: The Endless Frontier* 9, 31, 109

science
Aristotelian view 34
changing social contract 21–2
expansion of 3–4
governance of 393–4
in knowledge society 24–6
legitimacy of 4–5
linked to societal needs 19–20
as public good 31
resource allocation 202–3
sociology of 252
under threat 7

science policy 3
academic research 89–91
actors involved in 236–8
consideration of innovation and productivity 237–8
European 260–63
managerial approach 239–42
revised social contract 12
socio-technical controversies 91–2
warning about change 92–3

science-push model see linear model

scientific communities, knowledge creation and diffusion 309–32
scientific competencies, increasing importance of 11–12
scientific discourse, fears about opening up 5
scientific institutions
reconfiguration 30–32, 96–7
separation from wider society 3
scientific laboratories 34, 37, 39
scientific reputation
Matthew effect 256, 270
research productivity 214–23, 229–30

self-organization, coalition networks 256

scientific research coalitions study 251–86
European research area 260–63
introductory overview 251–60
motivating considerations 252–4
focal problems for economic analysis 254–6
theoretical approach and principal findings 257–9

model of collaboration formation
description of collaboration formation game 265–6
equilibria of coalition-formation game with a single funding agency 291–8
equilibrium collaborations 267–8
equilibrium definition and properties 266–7
external funding rules 264–5
notation and key assumptions 263–4

model of national and supra-national research funding 271–84
discussion 283–4
interaction of funding regimes 274–5
numerical example 275–83
outcomes for reputation distributions of interactions 299–308
supra-national research networks, formation of 269–71

scientists
gap between concerned groups and 49–52
interaction between 309
trust in 5
