List of Tables

1.1 Important aspects addressed that explain reform success or failure in country-wide case studies 27
1.2 The stakeholders in major country case studies 30
1.3 Political analysis of stakeholder interest in water-pricing reform in Tegucigalpa, Honduras 32
4.1 Summary statistics of WTP estimates for UK programme 89
4.2 Reasons for positive WTP for UK programme 91
4.3 Reasons for zero WTP for UK programme 92
4.4 Marginal willingness to pay for joint UK–Cyprus programme 93
4.5 Log–log model of WTP for joint UK–Cyprus programme 96
4.6 Comparison of median WTP under non-cooperation and cooperation 97
4A.1 Age group of respondents 105
4A.2 Education level of respondents 105
4A.3 Income level of respondents 105
4A.4 Membership of environmental and other organisations 106
4A.5 Respondent attitude toward the environment and conservation (in per cent) 106
6.1 Estimated parameters for the input distance function 144
6.2 Mean groundwater scarcity rents 146
6A.1 Technical efficiency estimates 149
7.1 Economic and hydrologic parameters 170
7.2 Steady-state conditions under optimal control 170
7.3 Examining the robustness of the GSE 171
8.1 Parameters estimated from valuation techniques 187
8.2 Water resource assessment, Cyprus 190
8.3 Water consumption in the major water schemes in Cyprus Mm³ per annum (1994) 192
8.4 Water balance for the Southern Conveyor Project 193
8.5 The hydrological analysis of the Kouris catchment area 196
8.6 Estimated household price and budget elasticities of demand for water 200
8.7 Optimal control versus common property welfare 202
8.8 Estimated risk premiums and marginal productivity for inputs 205
