

---

## Tables

---

1.1	Macroeconomic effects on mortality estimated using pooled data with location-specific fixed effects	8
2.1	Long-run concentration indices ( $CI^T$ ) and mobility indices ( $M^T$ ) for the ECHP, 1994–2001	24
5.1	Public health interventions	54
10.1	Annual health care expenditure, 1984 US\$	109
10.2	Estimated probability of death during the following year (per 1000)	111
12.1	Alternatives for achieving solidarity	127
12.2	Alternatives for neutralizing insurers' incentive to skim the cream (given uniform premiums)	133
16.1	Specific commitments of WTO members on individual health services	168
17.1	Decomposition of levels and change in concentration index. Height-for-age z-scores of children <10 years, Vietnam 1993–98	182
17.2	Decomposition of change in summary statistics of distribution of height-for-age z-scores of children <10 years, Vietnam 1993–98	189
18.1	Effect of health measures on health service utilization	200
18.2	Effect of socioeconomic variables and ethnicity on health service utilization	202
19.1	Infant and child mortality rates in the Asian region	207
19.2	Concentration indices for utilization of in-patient and out-patient services in the Asian region	208
19.3	Concentration indices for utilization of maternal and child health services in the Asian region	209
19.4	Kakwani progressivity indices: country and source	212
20.1	Attributes of the regulatory environment that may influence the nature and intensity of hospital competition	223
23.1	Services that may be contracted out	252
34.1	Description of EQ-5D, Health Utilities Index Mark 2 (HUI2) and Mark 3 (HUI3), Quality of Well-Being (QWB), and Short-Form 6D (SF-6D) multi-attribute utility measures	362
34.2	Health-adjusted life expectancy based on HUI3 from the 1996–97 National Population Health Survey (Canada)	367
35.1	Summary of main issues in developing a preference-based measure	378
36.1	Proposed checklist on issues that are pertinent to studies designed to elicit people's preferences regarding the relative value of a QALY	389
37.1	EuroWill: issues addressed and numbers of responses in each country	398
39.1	Matrices for choice sets in Example 1	420
39.2	Main effects only: two attributes with two levels, two attributes with four levels	422
39.3	Main effects and two factor interactions: four attributes with two levels	423

43.1	Summary of estimators addressing selection bias in observational studies	460
43.2	Illustrative example	464
44.1	Competing choice example	470
44.2	The 'shopping spree'	471
44.3	Ranking of 'shopping-sprees' programmes by cost-effectiveness ratio	472
44.4	Incremental cost-effectiveness ratios of programmes $M_1$ – $M_4$	473
44.5	Revised incremental cost-effectiveness ratios after eliminating programmes ruled out by extended dominance	474
44.6	Expanded 'shopping-sprees' incorporating competing choices	475
45.1	Costs, effects and cost-effectiveness of interventions for reducing exposure to selected risk factors in a region of the Americas	482
46.1	Choosing between programmes to maximize additional health gains	497
47.1	Cost-effectiveness of 40 mg simvastatin daily	510
48.1	Calculating EVPI	518
