

Figures

2.1	Three dimensions with their first-order interaction terms	46
2.2	The first-order interactions generate a knowledge-based economy as a next-order system	49
2.3	Vertical and horizontal interfaces allow for functional and institutional reorganization	53
2.4	Micro-foundations of the triple helix model of innovation	66
3.1	Evolution of average degree for highly committed and slightly committed individuals	92
3.2	Evolution of average betweenness for highly committed and slightly committed individuals	94
4.1	Internal and external dynamics of new firm development	107
4.2	Growth paths of the sample of evolving firms	114
4.3	Contrasting growth paths of evolving firms in knowledge services and biomedical	119
5.1	The Sophysical telecom cluster	138
5.2	The driving board	144
5.3	Similarity and complementarity as structuring the Sophysical area	151
6.1	The forces of governance	160
6.2	The implied dilemmas	165
6.3	Internet penetration in households, 2001–02	170
6.4	Interaction of the policy actions cycles	170
6.5	Evolution of IMEC's total income, 1985–2001	173
6.6	IMEC's total income from contract research with Flemish industry, 1985–2001	174
8.1	Utility maximization	204
8.2	Welfare triangles	204
8.3	Communication structures	207
