Figures

2.1 The determination of electricity capacity and prices 23
2.2 How the capacity mix affects revenues 27
2.3 Investment in England and Wales 42
2.4 Investment in Finland 43
2.5 Investment in Norway 44
2.6 Investment in Sweden 44
2.7 Investment in the United States 45
2A.1 The determination of electricity capacity and prices 49
3.1 Present-day cost of generating electricity in the UK, 2003/04 69
3.2 CCGT cost of entry by country in Europe in 2005 70
3.3 Spark spread in Texas, 1999–2002 78
3.4 Finnish comparison of generation costs 80
4.1 Defining congestion rent and congestion cost 89
4.2 Cost to consumers compared with congestion cost and rent 90
4.3 Relationship of congestion to a transmission-cause reliability problem 92
4.4 A positive present value is not sufficient 97
4.5 Lumpy technology may not exhibit returns to scale in the long run 101
4.6 Option rights reduce the feasible set of rights 111
4.7 Optimal investment in lump technology may be preferable 114
4.8 Optimal investment eliminates congestion 116
4.9 Investors should not capture full social benefit 117
7.1 Process of computation of locational signals 252
7.2 Average L and G tariffs in Europe 265
7.3 L nodal tariffs in Europe 266
7.4 G nodal tariffs in Europe 266
7.5 Original and new L tariffs in Spain for the IEM-13 system 269
7.6 Original and new G tariffs in Spain for the IEM-13 system 270
7.7 Comparison between the transmission tariff and the net inter-TSO payment for 17 European countries 271
7.8 Evolution of the energy price of several power exchanges belonging to Europex, January 2000 to November 2004 271
7A2.1 Proportionality principle in average participations 285
