

Tables

| | | |
|------|---|-----|
| 1.1 | Means and standard deviations of life satisfaction before and after crisis according to ethnicity | 11 |
| 1.2 | Means and standard deviations of heritage and mainstream dimensions of immigrant acculturation | 12 |
| 1.3 | Hierarchical regression for the prediction of well-being from acculturation and time (before and after crisis) | 13 |
| 2.1 | Demographic characteristics of the sample (N=554) | 29 |
| 2.2 | Mean scores of cultural groups for family adaptability and cohesion | 31 |
| 2.3 | Distribution of adversity according to cultural group | 32 |
| 2.4 | Family cohesion by levels of adversities | 33 |
| 2.5 | Hierarchical regressions for the prediction of family functioning from gender and adversities for three cultural groups | 33 |
| 2.6 | Hierarchical regressions for the prediction of school achievement from gender, SES, family adversity and family functioning for three cultural groups | 34 |
| 3.1 | Variables included for study | 47 |
| 3.2 | Correlation matrix of study variables | 53 |
| 3.3 | Multiple regression results predicting financial well-being | 53 |
| 4.1 | Typologies of workaholics (arranged in chronological order) | 66 |
| 4.2 | Workaholism and problems in psychophysical functioning – research results | 68 |
| 4.3 | Sources of workaholism in the family | 73 |
| 5.1 | Means and SD of MDL employees versus others and t-tests comparing them | 95 |
| 9.1 | Good and bad jobs and types of unemployment | 161 |
| 9.2 | Stage-wise theories of reactions to unemployment | 164 |
| 10.1 | Means, standard deviations, and correlations | 188 |
| 10.2 | Multilevel estimates for models predicting job security | 189 |
| 11.1 | What helps in managing mental health and employment? | 205 |
