

Figures

2.1	Framework of environmental tax policy in China	20
3.1	Revenues from environmentally related taxes as a percentage of total taxation, Belgium and China	37
3.2	Revenues from environmentally related taxes as a percentage of GDP, Belgium and China	38
3.3	Implicit tax rate on energy for the EU-27 countries in 2008 (in year 2000 €/tons of oil equivalent)	39
3.4	Composition of the tax revenues in China and Belgium	43
3.5	Evolution of the gasoline and diesel tax rates in China and Belgium (1971–2009, in 1983 €)	45
3.6	Fuel tax rates for gasoline and diesel in eight countries (EUR, 2010)	47
3.7	China's hierarchy layers of government administration	48
3.8	Composition of the maximum price for gasoline 95 and diesel in Belgium (%), Dec. 7, 2010	50
3.9	Responsiveness of the Belgian and Chinese fuel price mechanisms to the international oil price	51
4.1	Standard framework (Y^*) versus sustainable framework (Y^{**}) versus actual income (Y_A)	59
4.2	Magnitude of extra taxes ($\Delta\tau$)	59
4.3A	Standard framework (Y^*) versus sustainable framework (Y^{**}) with 2% extra taxes reinvested in KN	60
4.3B	Standard framework (Y^*) versus sustainable framework (Y^{**}) with 5% extra taxes reinvested in KN	61
4.4A	Standard framework (Y^*) versus sustainable framework (Y^{**}) with 2% extra taxes but no reinvestment versus actual income (Y_A)	62
4.4B	Standard framework (Y^*) versus sustainable framework (Y^{**}) with 5% extra taxes but no reinvestment versus actual income (Y_A)	62
5.1	Revenue collected from the water pollution discharge fee (2004–09)	68
6.1	The McKinsey global GHG abatement cost curve beyond business-as-usual – 2030	92
8.1	Number of bags given out by hour	123
8.2	Estimation of total number of bags given out per year	125
8.3	Life cycle analysis of plastic bags	126
13.1	Mineral tax and royalties as a share of mineral profits	205
