

Figures, Diagrams and Tables

FIGURES

1.1	Aggregate of all national current accounts according to IMF	1
2.1	Shares of final expenditure in GPP (1970 – 2010)	14
2.2	Share of the shadow economy in per cent of GPP (1960s – 2000s)	21
3.1a	GPP 1980 – 2011 in trillions US\$, current prices	26
3.1b	Growth rate of GPP 1980 – 2011	26
3.2a	GPP 1996 – 2002, in trillions US\$, current prices	29
3.2b	Annual growth rate of GPP (1996 – 2002)	29
3.3	Earth inflation rates in per cent (1980 – 2011)	30
3.4	Earth Price Index Numbers (2000 = 100) 1980 – 2011	30
3.5	Real and nominal annual GPP growth (1980 – 2011)	32
3.6	Real GPP growth and planet inflation (per cent, 1980 – 2011)	34
3.7	Earth unemployment rate in per cent (1991 – 2011)	35
3.8	Earth unemployment and inflation (1997 – 2011)	36
4.1	The condition $I = S$ in the Earth economy (Gross planet saving and investment in per cent of GPP, 1980 – 2011)	40
5.1	Earth's investment (in 1980 prices) versus long-term US interest rate in per cent, 1980 – 2011	53
5.2	Decreases in gross planet investment (trillions of US\$) lead recessionary periods (shaded areas)	59
6.1	Policy mix in 2009 (percentage of countries with stimulating monetary and fiscal policies)	62
6.2	Government expenditure and revenue shares in GPP (per cent, 2000 – 2011)	63
6.3	Earth's poverty pockets (2004)	67
6.4	Lorenz curve (approximate planet income distribution by quintiles (1990 – 2007)	68
6.5	Global Gini-coefficients (1820 – 2002) in per cent according to Milanovich (2006)	69
6.6	Globally super rich (per cent of GPP, 1910 – 1990)	70

6.7	Earth's fiscal balance and public debt (2001 – 2011, per cent of GPP)	71
7.1	Growth rate of Eurocurrency in circulation	75
7.2	Global velocity (GPP/M2) 1980 – 2010	76
7.3	Global (production weighted) monetary policy rate (2000 – April 2012)	82
7.4	Quantitative easing (Major central bank balance sheets in per cent of GPP, end of period 2007 – 2012Q1)	83
8.1a	Earth output gap (1991 – March 2012, in per cent)	96
8.1b	World industrial production and potential world industrial production (index numbers, 1991 – March 2012)	96
8.2	Okun's Law: Earth output gap and unemployment rate in per cent, 2001 – 2011)	97
9.1	Earth money growth and inflation 1984 – 2010	109
10.1	Two millennia of population and production	113
10.2	Two millennia of the drivers of real GPP growth (end of period, annual averages)	114
10.3	Drivers of real GPP growth (1951 – 2008, end of period, annual averages)	115
10.4	Population pyramids 1950 – 2050 (per cent of age cohort)	117
10.5	Earth capital stock 2005 (trillions of US\$)	119
10.6	World labour productivity and capital per worker in 1965 and 1992 (at international 1985 prices and dollars)	121
11.1	World fertility (children per woman) 1950 – 2050	133
11.2	World mobile cellular subscriptions (millions, 1980 – 2010)	134
11.3	Countries with a competition law in 1980 (left) and 2005 (right)	136
12.1	Average growth rates of real GPP in per cent during identified phases in Kondratieff cycles 1820 – 2011	143
13.1	KOF index of globalization, 1970 – 2009	153
13.2	Costs in terms of duration of increased participation in multilateral trade negotiations (GATT and WTO, 1946 – present)	155
13.3	Atmospheric carbon dioxide concentration 1000 – 2010 in ppm	156
13.4	Concentration in the world economy 1500 – 2008	158
14.1	Population and production shares of key players at the start of the waves of global integration (1950s – 2000s)	162
14.2	GPP shares of China, EU27 and the United States and Herfindahl index of the Earth economy 2010 – 2050	164
14.3	Number of democracies worldwide, 1989 – 2011	166

DIAGRAMS

2.1	Simple circular flow model of Earth economy	12
2.2	Production, value added and income	15
2.3	Planet Accounting Matrix	17
3.1	Key concepts in business cycle analysis	28
4.1	A simple consumption function	41
4.2	Life cycle consumption pattern	42
4.3	I = S equilibrium in the Earth economy	44
4.4	Different concepts of stability	45
4.5	Linear (left) and non-linear (right) curve	48
4.6	Graphical representation of multiplier process	49
5.1	NPV of a an investment of 35 at $t = 0$ with four positive payoffs of 10 in the periods $t = 1, 2, 3, 4$ for different interest rates	52
5.2	The IS curve	55
5.3	Graphical derivation of the IS curve	56
6.1	Proportional and progressive tax schedules	64
7.1	Components of money demand	77
7.2	An increase in the supply of money reduces the interest rate	78
7.3	The LM curve	79
7.4	Graphical derivation of the LM curve	80
8.1	Construction of the eartheconomic demand and supply model	85
8.2	Product market equilibrium and money market equilibrium in the ISLM model	86
8.3	An increase in government spending in the ISLM model	87
8.4	Eartheconomic demand schedule	89
8.5	Demand contraction followed by expansionary fiscal and monetary policy	90
8.6	Tax cut at full employment	91
8.7	Isoquants without (left) and with (right) substitution	93
8.8	Production functions with fixed technical coefficients (left) and substitution (right)	93
8.9	Labour market (neoclassical)	94
8.10	Labour market with minimum wage	95
8.11	Long-run and short-run production functions	98
8.12	Eartheconomic demand and long-run/short-run supply	99
9.1	Monetary policy is ineffective and fiscal policy is effective if the IS curve is interest insensitive	102
9.2	Relative interest rate (in)sensitivity of the IS curve	103
9.3	Liquidity trap and interest insensitive segment of LM curve	104

9.4	A closer look at the liquidity trap	105
9.5	Austerity measures have a stronger impact in the liquidity trap	106
9.6	ISLM and full employment level	107
9.7	Neoclassical (left) and Keynesian (right) eartheconomic supply curves	108
9.8	Identification problems	110
10.1	Solow production function in per capita terms	120
10.2	The neoclassical growth model	123
10.3	Increase in savings rate	124
10.4	Impact of an increase in saving on productivity (growth) and production growth	125
10.5	Transitory growth trajectories	126
11.1	Poverty trap in the Solow model	130
11.2	Increase in saving rate provides an escape from the poverty trap	132
11.3	Lower population growth can get the economy out of the poverty trap	133
11.4	Innovation and efficiency enhancement shift the production function up and lift the economy out of the poverty trap	135
11.5	Impact of structural reform on the product and the labour market	137
12.1	Summer, autumn, winter and spring characteristics of the Kondratieff wave	141
14.1	Multi-polar (left), multi-system (middle) and multi-lateral (right) governance	163

TABLES

2.1	Final spending components, 2009, trillions (10^{12}) of US\$, current prices	14
2.2	Planetary accounts by economic activity, 2009, trillions of dollars, current prices	15
2.3	Planet income account for manufacturing sector at constant prices (1995 dollars)	19
6.1	Least Developed Countries that (can) achieve MDGs	70
12.1	Economic waves	140
