

Acknowledgements

This book is the result of our long-standing engagement in empirical and conceptual research related to industrial policy in developing countries. As such, it draws on some elements of our earlier work, which have been incorporated here into a broader framework of the foundations of industrial policy and its impact on the multiple goals that societies need to pursue in today's development reality. In this, the challenge of making economic growth processes socially and environmentally sustainable takes centre stage.

This book would not have seen the light of day without intense discussions and advice to which many colleagues have contributed. We would like to thank in particular Ha-Joon Chang, Michele Clara, Mike Hobday, Dirk Messner, Kenichi Ohno, Philipp Neuerburg, Hubert Schmitz and Imme Scholz for their comments on earlier versions of some chapters of the text. We also acknowledge the contributions made by Anna Pegels and Georgeta Vidican through joint work on green industrial policy and by Steffen Erdle, Friedrich Kaufmann, Matthias Krause, Markus Loewe and Christina Rosendahl through earlier country studies. The assistance of Ina Klemke proved invaluable in knocking the manuscript into shape. Needless to add that all remaining errors and inaccuracies are entirely ours.
