AXA General Insurance Ltd v HM
Advocate 146
Azienda Agro-Zootecnic Franchini sarl 31, 78

Beck, U. 124
Belgium Green Certificates 98–9, 100
Bell, S. 185–6
Bergsma, Emmy 10, 336
Berlusconi, Silvio 297
biodiversity 227, 250
   and bio-fuels/biomass 163–5, 280–84, 342
   focus on ‘extraordinary’ biodiversity 281–2
   and climate change policy 41, 156, 157–8, 162, 164–5, 342
biofuels 277
   agricultural biomass as source of 163
   negative consequences of growing energy crops 281
   defining new-generation bio-fuels 283–5
   environmentally destructive bio-fuels 56
   France 163–4
   sustainability criteria/requirements 56–7, 280
   negative environmental impact of first-generation bio-fuels 280, 281
   production of bio-fuels and incomplete evaluation of sustainability 280–83
   sustainability challenged by no definition of new generation bio-fuels 283–5
biogas 277
   agricultural biomass as source of 163
   certificates of origin 244
   as key source of renewable energy 324
   nature of 286
   in rural areas 240
   unexpected impact on waste-related
law/incentive to develop biogas 286–9
waste contributing to production 287
biomass 9, 273–93, 342
agricultural biomass 163
bio-fuels see bio-fuels
biogas see biogas
definition 277, 279
from energy to waste: ecological
constraints on production of
bio-fuels 279–85
production of bio-fuels and
incomplete evaluation of
sustainability 280–81
sustainability challenged by no
definition of new generation
bio-fuels 283–5
as key source of renewable energy
277, 324
need for better integration between
legislation on waste and energy
292–3
potential for growth 279
subject of action plan 278–9
transformation into bio-fuel or
biogas 277
from waste to energy: movement in
search of greater consistency
285–92
new energy planning as source of
conflict with waste planning
289–92
unexpected impact on waste-
related law/incentive to
develop biogas 286–9
bio-waste 287–8
Birds Directive 43
Brazil 140, 178
buildings 19, 34, 45, 60, 117

instruments for tackling global climate change 185–6
perceived as problem with industrial/technological solutions 41, 116
scientific uncertainty 169
Commission v Austria 75
Commission v Belgium 71
Commission v Denmark (Danish Bottle) 78
Commission v European Parliament 75
Commission v France 71, 75–6, 83, 101
Commission v Germany 77
Commission v Italy 25
common but differentiated responsibilities (CBDR) 253–4
concluding observations and forward look 331–53
conclusion 352–3
distribution of competences between EU and member states 333–6
member states ability to introduce more stringent requirements 334
other restrictions imposed by EU law upon member states 335–6
substantive choices left by EU law to member states 334–5
forward look 345–52
future interplay between EU and member states in climate mitigation 351–2
implications for climate burden distribution/patterns of consumption 350–51
involving the public in delivery of specific climate projects 347–8
need for legal certainty 346–7
role of government with regard to information and public awareness 349–50
overarching legal issues 332
specific observations 333–45
challenges arising from involvement of civil society in adopting important regulatory choices 344–5
distribution of competences between EU and member states 333–6
distribution of competences at national level across different levels of government 336–7
structuring of national climate laws 338–41
unintended consequences stemming from complex regulatory mixes 344
ways member states integrate climate considerations into existing energy and environmental policies 341–4
Conference of Experts on the Climate and Energy Contribution 173
Conference of Parties to the Climate Convention 256
Climate law in EU member states

Constitutional Treaty  91
consumers/citizens combating climate change  44–5
educating people that low carbon challenge needs new social contract  200
EU GHG emissions targets production-based not consumption-based  39, 333
French policy of enlisting support of whole society  176
involving civil society in regulatory choices  344–5
involving the public in delivery of specific climate projects  347–8
need to build substantive levels of engagement with civil society  116, 133–4
perception of opportunities from climate change  41–2
perception that technology provides climate change solutions  41, 116
Scottish public engagement strategy  152, 345
social acceptability of renewable installations in Italy  310
Sustainable Energy Europe campaign to raise public awareness  310
energy efficiency  58–9
and consumer protection  247
energy performance certificates  62
guarantees of origin  58, 306
role of government with regard to information and public awareness  349–50

Copenhagen Accord  140, 179
cost equalization system see under EU state aid law and national climate regulation

Costa v ENEL  89, 90
Court of First Instance see General Court
Court of Justice of the European Union (CJEU)  7, 334

equality principle and GHG emissions  31
ETS environmental/non-environmental objectives  83–4, 85, 867
functioning of the internal market as highly valued goal  76–7
fundamental freedoms constrained by measures reducing GHG emissions 79
General Court see General Court
member states adopting more stringent protective measures  32–3, 71, 73
achieve a higher level of environmental protection  77
failure by member state to notify more stringent protective measures  78
measures following same environmental objectives as Union act  74–5
measures within application scope of EU measure under Art 192 TFEU  73–4
respect the notification duty  78–9
respect the secondary objectives of the Union act  75–7
respect other Union law  77–8
proportionality principle
   domestic legislation pursuing same objectives as EU measures  33
   more stringent protective measures  78
   national law affecting other EU provisions  77–8
   obligations under environmental directives  31
   proportionality stricto sensu  77–8
reasons  131
state aid
   assessing effects of aid on competitive position of recipient  93
   credit and trade system  95–104
determining aid based solely on effects of measures  92
state, concept of  97
undertaking, concept of  92–3
credit and trade system see under EU state aid law and national climate regulation

role 125–6
significance of an independent committee 124–8
‘Climategate’ 349–50
Energy Act (2011) 118–20
Carbon Plan 121, 122, 123
carbon storage 269, 270–74
Climate Change Levy and Climate Change Agreements 119, 142, 147
dominant themes 118
electricity suppliers to help secure energy efficiency improvements 119–20
energy efficiency 118–19
Energy Performance Certificates 120
Feed-in Tariffs 121, 342
Green Deal 120, 121–2
reliance on mixed portfolio 119
renewables, incentivizing 120–21
Renewables Obligation 120, 132
‘smart regulatory technique’, adoption of 119
equality principle and the public interest 32
emissions performance standards 69, 122
national standards for carbon dioxide emissions 49, 69
Climate law in EU member states

judicial review   128–32
administrative discretion   129, 131
financial resources at stake   129
standing   129
targets enshrined in primary legislation in ‘soft’ language   130
wording in Climate Change Act 2008 giving rise to potential challenge   131–2
Kyoto Protocol   115
national approach to climate law-making   8, 113–34
climate regulation in the UK   117–24
conclusion   132–4
EU commitments and national policy making   114–17
robustness of legislative framework/legitimacy issue, importance of   133
significance of an independent climate change committee   124–8
statutory duties and enforcement prospects   128–32
restructuring UK energy supply away from coal towards gas   115
Scotland see Scotland: constraints and opportunities in a devolved system
Stern Review   117, 168
waste   146–7, 153
United Kingdom carbon capture and storage regime   9, 268–76, 341–2
advantages to UK of CCS   269, 273
challenges
aiming at a moving target   271–2
challenge of capture readiness   274–5
facilitating third party access   275
identifying the competent regulatory authority   270–71
jurisdictional complexity   272–3
public disclosure versus commercial interest protection   273–4
quadruple challenge   269–70, 275–6, 341
storage licences   271–2
Energy Act (2008), 269, 270–74
Food and Environment Protection Act 1985 (FEPA)/licence   270
overview of UK CCS policy   368–9
CCS demonstration projects   269, 271
establishment of Office of Carbon Capture and Storage   269
good storage sites under North Sea   268–9
United Nations Framework Convention on Climate Change (UNFCCC)   128
Art 2   236
Art 3(1)   253
data presented to   159–60
France   159, 169
goal of Convention   236
Italy   295
as main international treaty on climate change   235–6
margins of uncertainty   159
Spain   211
United States   140
Van der Grijp, Nicolen   4, 10, 336, 338
Van Gend en Loos   90
waste   9, 34, 75, 117, 147, 339, 342
from energy to waste: ecological constraints on production of bio-fuels   279–85
production of bio-fuels and incomplete evaluation of sustainability   280–81
sustainability challenged by no definition of new generation bio-fuels   283–5
UK   146–7, 153
as under-exploited source of energy   279
from waste to energy: movement in search of greater consistency   285–92
