

Acknowledgements

This book stems from a team research project, and from team efforts extending well beyond its named authors. We owe a substantial debt of gratitude to Elyse Stanes for project management and technical assistance across several ethnographic and quantitative activities over five years; and to Chantel Carr for her long hours doing crucial editing, research assistance and logistical work behind the scenes in book production. Chantel also provided important critical and technical feedback on draft chapters. Without these two individuals the book would simply never have been finished. We also thank Lucy Farrier and Alex Tindale for their research assistance and Chris Brennan-Horley for incisive comments on an earlier draft of this book.

Various chapters of the book draw on research conducted by our post-doctoral fellows and research students working at the University of Wollongong under the umbrella of our household sustainability project. Chapter 2 benefits from household ethnographies conducted by Bryce Appleby for his thesis, 'Skippy the "Green" Kangaroo: Identifying Resistances to Eating Kangaroo in the Home in a Context of Climate Change', as well as research on wheat conducted by Lesley Head in collaboration with Doctors Jenny Atchison and Alison Gates. Chapter 3 benefits from ethnographies of clothing consumption conducted by Elyse Stanes for her thesis 'Is Green the New Black? Questions of Sustainability for the Fashion Industry'. Chapter 4 benefits from quantitative and qualitative research by Candice Moy for her thesis on water tanks. Chapter 7 benefits from household ethnographies conducted by Gordon Waitt's advanced human geography (EESC 307) class of 2011. Chapter 10 benefits from driving ethnographies conducted by Theresa Harada for her thesis 'Driving Cultures and Climate Change: Bodies, Space and Affluence'. Chapter 13 benefits from ethnographic work by Erin Borger, for her thesis 'Dynamics of Extended Family Households: A Cultural Economy of Sustainability' (co-supervised by Dr Natascha Klocker). Throughout the book our treatment of gender issues benefits from the ethnographic work conducted by Vanessa Organo for her thesis 'Sustainable households: an analysis of time and gender in a household context'.

Beyond our household sustainability project are other collaborators whose work has influenced parts of the book: Pat Muir for collaborative work with Lesley Head on backyard gardens; Peter Osman (CSIRO) for collaborative

work with Nick Gill on solar hot water; and Paul Cooper from UOW's Sustainable Buildings Research Centre for collaborative work on retrofitting homes.

For leads, conversations and resources helping us think through the issues (and beyond specific projects listed above) we thank Jenny Atchison, Paul Cooper, Mark Davidson, Eliza de Vet, Kelly Dombroski, Rosie Emery, Alison Gates, Leah Gibbs, Charlie Gillon, Andrew Gorman-Murray, Russell Hitchings, Natascha Klocker, Ruth Lane, Beth Laurenson, Candice Moy, Pat Muir, Vanessa Organo, Emma Power, Kate Roggeveen, Justin Spinney, Emma Waight, and John Wright. We also thank our families for their patience and equanimity at home – and for daily debating of our own sustainability dilemmas.

This book stems from an Australian Research Council (ARC) Discovery Project 'Making less space for carbon: cultural research for climate change mitigation and adaptation' (DP0986041) and an ARC Future Fellowship to Chris Gibson: 'Crisis and change: cultural economic research on the adaptability and sustainability of Australian households' (FT0991193). Its writing was also facilitated by an ARC Laureate Fellowship to Lesley Head (FL0992397).

Finally, we would like to thank all the householders who were research participants in the various sub-projects, surveys and ethnographic investigations featured in this book. Without their generosity and willingness to allow us into their homes, gardens and garages (and into their water and electricity bills), there would be no stories for this book.
