

Tables

2.1	Prize datasets recently compiled in selected literature	7
3.1	Technology Readiness Levels (TRL) applied to space engineering	32
4.1	Main characteristics of prizes investigated in this book	48
5.1	Summary of data for embedded cases in the AXP	57
5.2	Summary of data for embedded cases in the NGLLC	65
6.1	Selected robotic planetary exploration programs	88
6.2	LunaCorp private initiative in the 1990s and GLXP team Astrobotic	95
6.3	Main characteristics of GLXP teams that participated in the investigation	100
6.4	Number of GLXP teams that subcontract and use COTS technologies, by type of entrant	112
6.5	Organization of R&D activities of GLXP teams (exemplar forms)	116
6.6	Number and type of partners of GLXP teams, by type of entrant	118
6.7	Selected examples of GLXP technology outputs in first three years of competition	130
6.8	Number of GLXP teams that achieved significant innovations, by type of entrant	135
7.1	Main factors that determine space R&D organization in selected contexts	156
8.1	Summary of research probes, findings and general implications	180
8.2	Typology of prizes according to targets along the innovation pathway	188
8.3	Examples of prize-based program goals and definition of key prize design parameters	198
A.1	AXP entrants	211
A.2	NGLLC entrants (2006–2009)	214
A.3	GLXP entrants	216
