Figures

1.1 The interaction of rapid climate change and habitat fragmentation
1.2 Multinational corporations are systems of vision, inputs, throughputs and outputs
1.3 Industrial ecosystem at Kalundborg, Denmark
1.4 A schematic for thinking about sustainable innovation
2.1 The scope of Japan’s eco-innovation concept
2.2 A proposed framework of eco-innovation
2.3 Conceptual relationships between sustainable production and eco-innovation
2.4 Diverse types of eco-innovation: incremental to systemic
2.5 Mapping primary focuses of eco-innovation examples
2.6 Various factors surrounding eco-innovation
2.7 Overview of policy instruments for eco-innovation
3.1 A new representation of sustainable development
3.2 An illustration of the seven core subjects of ISO 26000 standard
9.1 Creator profile and sustainable innovation strategy
11.1 The three dimensions of a sustainable logistics
11.2 The evolution of IWT in France from 1999 to 2009
11.3 Types of goods carried by IWT in France
12.1 Logistics market volume and functional segments
12.2 Sustainable investments in logistics
12.3 Stock keeping centralization (Germany)
12.4 CO₂ emissions caused by the electricity mix in Germany
12.5 Technology Innovation and Sustainability Assessment in Logistics (TISAL)
