

Tables

1.1	Application of the analytical framework on four types of indicators	14
2A.1	State-level, non-fuel, non-vehicle environmentally related taxes in the United States	33
2A.2	Year of estimates of revenues from environmentally related fees and charges included in Figure 2.2	38
4.1	Price elasticities of the demand for transport fuel	61
4.2	Income elasticities of fuel demand	62
8.1	CO ₂ emissions in Brazil's transport sector	118
8.2	CO ₂ emissions per vehicle type in Brazil	118
8.3	Total energy consumption in Brazil by sector (2009)	119
8.4	Sources of energy consumption in the transport sector in Brazil 2009	120
8.5	Electric power generation	121
8.6	Comparison of various types of vehicles: relative consumption per km	123
8.7	Emissions from vehicles powered by non-renewable fuels	123
9.1	Comparing true registration tax and simulation, 2008	134
9.2	Simulating registration tax reform	139
13.1	Budget related to nuclear power generation (2007–2011)	202
13.2	Grants and economic effects associated with a disposal site for local governments (estimates)	203
13.3	Estimated back-end costs for different operational categories	205
14.1	Calculation of actual unit power generation costs	213
14.2	The assumed liability of TEPCO due to the Fukushima accident (in five years)	215
14.3	Nuclear fuel tax of Japanese prefectures	219
15.1	Results from model 1: effect of landfill taxes on the percentage of landfilling, recycling, incinerating and composting	237
15.2	Results from model 2: effect of landfill taxes and other variables on the percentage of landfilling	239

16.1	Concepts and amounts of the tax rebate on the disposal of municipal waste in Catalonia, 2004–2011	247
16.2	Correction factors accounting for the quality of biowaste on the tax rebate on the disposal of municipal waste in Catalonia, 2004–2010	249
16.3	Generation of municipal waste in Catalonia, in absolute and in per capita terms, 2000–2010	250
16.4	Revenue and tax rebates on landfilling and incineration of municipal waste in Catalonia, 2004–2010	253
