

Tables

F.1	Range of uses for ecosystem service valuation	xxi
1.1	Evidence regarding rates of biodiversity loss estimated by different agencies	2
1.2	Evidence regarding rates of loss or degradation of ecosystems and ecosystem services	3
1.3	Total monetary value of the bundle of ecosystem services per biome (2007 Int.\$/ha/year)	5
1.4	Summary of monetary values for each service per biome (2007 Int.\$/ha/year)	6
2.1	Final ecosystem services and corresponding goods: examples from the UK NEA	31
2.2	Various valuation methods applied to ecosystem services	36
2.3	Land-use share equation parameter estimates for cereals	44
4.1	Effectiveness of cheaptalk mitigation technique	93
4.2	Variable definitions and sub-sample means (standard errors)	101
4.3	Hypothetical and calibrated mean values, and calibration factor	102
4.4	Analysis of variance between hypothetical all yes (HY), and calibrated hypothetical all yes responses (HY-cl)	103
4.5	Analysis of variance between hypothetical all yes (HY), pledging (PL), and cheaptalk (CT)	103
4.6	Analysis of variance between hypothetical all yes (HY) and calibrated pledging (PL-cl)	104
4.7	Binary logistic regression model; dependent variable: Pledge	105
5.1	The attribute variables used in the final pooled model	117
5.2	The results of the random parameters probit model regression	119
5.3	Mean marginal WTP (MWTP) per household per annum	120
5.A1	Attributes and levels used in the choice experiments	131
6.1	List of 'debtor' nations according to this 'ecological balance' approach	142
6.2	List of 'surplus' nations according to this 'ecological balance' approach	144

7.1	Comparison of the pollination service value estimates from the reviewed case studies	154
8.1	Variable names and definitions	174
9.1	Summary of average global value of annual ecosystem services	192
9.2	Summary of average global value of annual ecosystem services of forest ecosystems	193
9.3	Value of annual ecosystem services for global biosphere and forest ecosystems	194
9.4	Value of watershed protection/hydrological services	201
9.5	Value of soil conservation services	206
9.6	Value of carbon sequestration/gas regulation services	209
9.7	Value of recreation services	213
9.8	Valuation of other services provided by forest ecosystems	216
9.9	Summary of the annual value of forest ecosystem services	220
11.1	Ecosystem service, benefits, valuation methods and norms	248
11.2	Estimated amount of carbon fixed in Oku Aizu Forest Ecosystem Reserve, Japan	256
11.3	Estimated quantity of nutrients (NPK) accumulated in Oku Aizu Forest Ecosystem Reserve, Japan	259
11.4	Summary of the total economic value of ecosystem services provided by Oku Aizu Forest Ecosystem Reserve, Japan	263
12.1	Choice experiment attributes, levels and multinomial logit regression results	272
12.2	Willingness to pay for changes in forest characteristics and management	274
13.1	Economic value of ecosystem services from agriculture, forests and fisheries in Japan	282
13.2	Economic value of ecosystem services from agricultural and rural landscapes in Japan	283
15.1	Overview of primary valuation studies (left) and forest plot of effect-size estimates (right)	317
15.2	Moderator variables of the meta-regression model	318
15.3	Econometric results of the meta-regression of individual, per-trip values	323
15.4	Contribution of domestic, international and local visitors to coastal recreation values at country level and fraction of real coastal GDP (values in million IS/year)	327
15.5	Contribution of domestic, international and local visitors to coastal recreation values at the level of large marine	

	ecosystems and fraction of real coastal GDP (values in million IS/year)	328
16.1	Key characteristics, Swift Tract and Barton Island reef projects	336
16.2	Estimated annual harvest enhancement of commercially or recreationally fished finfish and crab species by 2.37 ha of restored oyster reefs in Mobile Bay, AL	337
16.3	Consumer surplus estimates for recreationally caught species enhanced by Gulf of Mexico oyster reefs	339
16.4	Estimated mean weight of recreational catch	339
16.5	2010 Dockside prices of fish species whose commercial landings are enhanced by oyster reefs	343
16.6	Annual net benefits from fishery enhancement by 3.6-mile oyster reef restoration	347
16.7	Present value of fishery enhancement and shoreline erosion protection by oyster reefs at study sites and developed shorelines in Mobile Bay	351
17.1	Coastal ecosystems: global area and conversion rates; averages and standard deviations of carbon sequestration rates; ranges for the main carbon pools; estimates of total carbon at risk	363
18.1	Descriptive statistics of variables used in the econometric models	383
18.2	Estimates of different econometric models	388
19.1	Summary demographic and land management characteristics	400
19.2	PES programme attribute descriptions and levels used in choice experiments	403
19.3	Conditional logit model of responses to the choice questions	406
