Contributors

**Dr. Timo Aaltonen** has been a principal researcher in the Nokia Research Center since 2010. He got his PhD in 2005 while studying formal methods. After finishing his dissertation he initiated open source research in the Department of Software Systems at Tampere University of Technology together with Imed Hammouda. Aaltonen has managed several open source related research projects over the years.

**Thomas A. Alspaugh** is a project scientist at the Institute for Software Research, University of California, Irvine, and an adjunct professor of Computer Science at Georgetown University. His research interests are in software engineering, requirements, and licensing. Before completing his PhD, he worked as a software developer, team lead, and manager in industry, and as a computer scientist at the Naval Research Laboratory on the Software Cost Reduction or A-7 project.

**Carina Alves** is an Associate Professor at the Center of Informatics at Federal University of Pernambuco. She is Coordinator of Industrial Liaison and Head of Systems Information Department. She received her PhD in Computer Science from University College London. Her main research interests are business process management, empirical software engineering, and software ecosystems.

**Joey van Angeren** is a graduating MSc student in Business Informatics at Utrecht University. He received his BSc degree in Information Science from Utrecht University in 2011. His research interests include software ecosystems, software business models, software pricing and software product management. Within the domain of software ecosystems he has published multiple papers about partnership models and buyer-supplier relationships in ecosystems.

**Mohsen Anvaari** is a PhD candidate in the Department of Computer and Information Science at the Norwegian University of Science and Technology. He received his Master’s degree in Software Engineering and Management from University of Gothenburg in Sweden. His research interests are in software architecture, software evolution and empirical software engineering.

**Hazeline U. Asuncion** is an Assistant Professor at the Computing and Software Systems Program, University of Washington, Bothell. Her research interests are software traceability and data provenance. She received her PhD from the School of Information and Computer Science at the University of California, Irvine.

**Olavo Barbosa** has worked in software development (mainly for web development) in different programming languages since 2002. He also has experience in object oriented programming and design patterns and Software Process. He lives and works in Recife, Brazil, with his son Arthur, and graduated in Computer Science from Universidade Católica de
Pernambuco, Brazil (2005); MSc in software engineering from Faculdade Boa Viagem, Brazil (2008); and MSc degree in computer science from Universidade Federal de Pernambuco, Brazil (2012). Invited for a government position, he now works in the State Agency for Information Technology (ATI/PE, Brazil) and also as IT Manager in the Secretariat of the Government of Pernambuco (Brazil).

Stefan Biffl is an Associate Professor of Software Engineering at the Vienna University of Technology. He is the head of the Christian Doppler research laboratory, Software Engineering Integration for Flexible Automation Systems and was the principal researcher of the Complex Systems Design and Engineering Laboratory. He was a guest researcher at the Fraunhofer Institute of Experimental Software Engineering and the Czech Technical University, Department of Cybernetics. His research interests include project and quality management in software engineering, with a special focus on value-based software engineering and empirical evaluation. He is a member of the ACM, IEEE, and the IFIP Technical Committee on Software Engineering.

Sjaak Brinkkemper is Professor of Organization and Information at the Department of Information and Computing Sciences of Utrecht University, the Netherlands. He leads a group of about 20 researchers specializing in product software development and entrepreneurship. The main research themes of the group are methodology of product software development, implementation and adoption, and business-economic aspects of the product software industry.

Guido van Capelleveen received his BSc in Information Science at University of Utrecht and is currently finishing his MSc at Twente University in Business Information Technology. As freelance web developer he has much interaction with developers of open source software ecosystems.

Michael A. Cusumano is the Sloan Management Review Distinguished Professor of Management at the Massachusetts Institute of Technology's Sloan School of Management, with a joint appointment in the MIT Engineering Systems Division. He specializes in strategy, product development, and entrepreneurship in the computer software industry, as well as automobiles and consumer electronics. He teaches courses on The Software Business and Digital Platforms as well as Advanced Strategic Management.

Deepak Dhungana is a senior research scientist at Siemens Corporate Technology, located in Vienna Austria. He holds a PhD and a Masters’ degree in computer science from Johannes Kepler University, Linz. His research focuses on configuration technologies, particularly their application in large industrial scale systems. Deepak is actively involved in several projects in industry, where he keenly advocates model-driven software engineering approaches.

Rodrigo Pereira dos Santos is a PhD student in Systems Engineering and Computer Science at the Federal University of Rio de Janeiro (COPPE/UFRJ), Master (2010) in Systems Engineering and Computer Science at COPPE/UFRJ, and Bachelor (2007) in Computer Science at Federal University of Lavras (UFLA). He is a Professor of Software Engineering at Brazilian Open University (UAB) in topics related to Software Reuse, Software Architecture and Software Modeling. He is also a consultant in analysis and design of some web platforms based on Joomla, Java EE and Moodle. His
Contributors

research topics are Software Ecosystems and Software Reuse, and Software Engineering Education based on Games and Empirical Research.

Anthony Finkelstein a graduate in systems engineering holding a BEng, MSC and PhD is Professor of Software Systems Engineering at University College London (UCL), a leading UK research university, where he works in the broad field of software systems engineering. He has published more than 200 scientific papers and secured more than £20m of research funding. He is a Fellow of both the Institution of Engineering and Technology and the British Computer Society and has been active professionally in both, serving on numerous boards and committees. In 2009 he received the Oliver Lodge Medal of the Institution of Engineering and Technology for outstanding achievement in the area of Information Technology. He has been recognized by the IEEE for his contributions to the field of requirements engineering and for his professional service.

Mathieu Goeminne studies the evolution of open source communities in the University of Mons (Belgium) in the context of his PhD thesis.

Iris Groher works as Assistant Professor at the Johannes Kepler University, Linz. Before that she worked for Siemens Corporate Technology in Munich, Germany. Her fields of interest are software product line engineering, software architecture, and model-driven software development. Apart from research, she teaches courses on software engineering for bachelor and master programs in business informatics and computer science.

Imed Hammouda is currently an adjunct professor at Tampere University of Technology (TUT) where he heads the international masters program at the Department of Software Systems. He got his PhD in software engineering from TUT in 2005. Dr. Hammouda’s research interests include open source software, community-driven software development, and software architecture. He leads TUTOpen: a TUT research group on open source software. He has led several research projects related to various open initiatives. In addition to his academic career, he has worked as a software development manager at Suvisoft Oy Ltd, a Finnish service provider specializing in online event management solutions.

Erik den Hartigh is an assistant professor of Strategy and Innovation at the School of Economics and Administrative Sciences of Özyeğin University (Istanbul, Turkey). He is also an affiliated assistant professor with the Department of Technology, Strategy and Entrepreneurship of the Delft University of Technology. His research area is corporate strategy, innovation and business networks. He teaches courses in general management, corporate strategy, technology strategy, innovation strategy and innovation systems.

Slinger Jansen is Assistant Professor at the Department of Information and Computer Science at Utrecht University. His research focuses on software product management and software ecosystems, with a strong entrepreneurial component. Jansen received his PhD in computer science from Utrecht University, based on the 2007 work entitled “Customer Configuration Updating in a Software Supply Network”, PhD thesis Utrecht University.

Adolfo Jiménez Salas graduated as an industrial engineer in 2001 and received a Master’s degree from Delft University, with a focus on business ecosystems. His research interests include the type of relationships and variables that contribute to the performance of technical firms, especially on how these factors impact the innovative capacity.
Jaap Kabbedijk is a PhD candidate and junior researcher at the Department of Information and Computing Sciences at Utrecht University. His research currently focuses on runtime variability in multi-tenant software-as-a-service environments, but he has also published several scientific papers in the area of software ecosystems and requirements engineering.

Marjo Kauppinen is a Professor (pro tem) at Aalto University, Finland. Her research interests include requirements engineering from the perspective of creativity and customer value, alignment of requirements engineering and testing, solution planning, and roadmapping. She is a member of the program committee of RE’12, REFSQ’12, and ICSOB’12.

Terhi Kilamo is working as a teaching associate at Tampere University of Technology (TUT) Department of Software Systems. She is an active member of the TUTOpen (TUT research group on open source software) and is currently completing her doctoral degree with a focus on the essential properties of open development communities.

Yan-Ru Li received his PhD of Management of Technology (MOT), Master of Management Science, and Bachelor of Information Management, and thereafter became an entrepreneur and consultant. Currently, he is assistant professor for the Department of Information Management, Aletheia University and researcher for the Institute for Knowledge Services and Innovation, Yuan-Ze University. His current research concentrates on technology venture, business strategy, and patent valuation and analysis. Additionally, Li was the winner of the 6th SME Essay Award (Ministry of Economic Affairs) and Essay Competition Award of Management (Chinese Management Association). During his career, he has published 60 conference and journal papers, focusing mainly on MOT areas.

Lutzen Luinenburg is a product manager at GX Software, a software company that produces web content management systems. Lutzen's research interests include web information system development methods and software product management.

Tom Mens obtained a PhD in Science in 1999 at the Vrije Universiteit, Brussels. After having been a postdoctoral fellow of the Fund for Scientific Research, Flanders (FWO) he became a lecturer and full professor at the University of Mons, where he founded and directs the software engineering lab. He is an active member of the UMONS research institutes COMPLEXYS, INFORTECH and NUMEDIART, and is founding chair of the ERCIM Working Group on Software Evolution. He is involved in several scientific interuniversity research projects and collaborations, mainly on the topic of software evolution. He has published numerous peer-reviewed articles in international journals and conferences, co-edited the 2008 Springer book “Software Evolution”, and was program co-chair of CSMR 2011, CSMR 2012 and ICSM 2013.

Dr. Tommi Mikkonen is a Professor of Computer Science at Tampere University of Technology, Finland. Tommi pioneered the research and education on open source software development in Finland. Tommi’s current research interests include open source software development, cloud computing, web programming, mashup development, and community creation.
Contributors

Dr. Karl Michael Popp is Director of Mergers and Acquisitions in the corporate development team at SAP AG, one of the largest software companies in the world, responsible for holistic analysis of acquisition opportunities and post merger integration.

Walt Scacchi is senior research scientist and research faculty member in the Institute for Software Research, and also Director of Research at the Center for Computer Games and Virtual Worlds, both at the University of California, Irvine. He received a PhD in Information and Computer Science at UC Irvine in 1981. From 1981–1998, he was a Professor at the University of Southern California. Dr. Scacchi returned to UC Irvine in 1999. His research interests include open source software development, computer game culture and technology, virtual worlds for modeling and simulating complex engineering and business processes, developing decentralized heterogeneous information systems, software acquisition, and organizational analysis of system development projects. Dr. Scacchi is an active researcher with more than 150 research publications, and has directed more than 60 externally funded research projects. He has also held numerous consulting and visiting scientist positions with more than 25 firms or institutes, including four start-up ventures.

Elisabeth Schludermann holds a degree in ecology and studies the relationships between abiotic factors of natural ecosystems and the biotia. Her focus lies on aquatic systems, mainly rivers, where she investigates and models the interactions between individual peculiarities of organisms and abiotic parameters on transport processes (e.g. drift) by the means of experimental studies.

Jurriaan Souer received his PhD from Utrecht University. He is a business developer at GX Software, a company that specializes in web content management systems. Jurriaan’s current research interests are development and implementation methods of web information systems.

Michiel Tol works within Microsoft on enterprise customer marketing after graduating from the Erasmus University of Rotterdam.

Martti Viljainen holds an MSc from Helsinki University of Technology (2005) and is a researcher and industry practitioner. His research field is software engineering with a focus on software ecosystems. He is married with one daughter.

Wouter Visscher works within Microsoft on channel business development after graduating from Delft University of Technology.

Claudia Werner holds a PhD from COPPE/UFRJ (1992) and has been an Associate Professor in the Systems Engineering and Computing Program at COPPE/UFRJ since 1994, in the software engineering area, where she leads the Software Reuse Group. She is also a CNPq researcher (level 1D), and has been performing research on software engineering with emphasis on software reuse, component-based development and software product lines. She has published over 200 papers in national and international conferences and journals, including book chapters. She is a member of the Brazilian Computer Society (SBC). She has also been a member of program committees at national and international conferences, as well as a journal reviewer.
