Figures

1.1 Process flowchart for first-generation ethanol production from corn 6
1.2 Process flowchart of esterification to create biodiesel fuel 7
2.1 Estimated (i) enforcement capacity, and (ii) comprehensiveness of environmental legislation, for all the assessed countries 42
2.2 Classification based on (i) likelihood of producing significant amounts of biomass or bioenergy products for export markets (A: higher / B: lower), and (ii) probability of a domestic demand for sustainable products (1: higher / 2: lower) 44
2.3 (A) Status of domestic public governance, (B) role of domestic private governance, and (C) role of international private governance, in promoting sustainable biomass production 45
2.4 Connections between bioenergy and the assessed laws 49
2.5 Percentage of bioenergy-related laws in each country that restrict activities similar to the EU-RED sustainability requirements 50
2.6 Percentage of bioenergy-related laws in each country that focus on different general aspects of sustainability 52
13.1 Key elements of the technology S-curve in the biofuels industry 320
13.2 Biofuels weed risk pathway model 330
14.1 US ethanol production and Renewable Fuel Standards 1 and 2 (RFS2 Revised) 341
14.2 Canadian ethanol production and Renewable Fuels Regulation (RFR) 341
17.1 “The governance triangle”: a classification system for governance schemes 411
17.2 Evolution of “the governance triangle” 412
17.3 “The enforcement space” 413
17.4 Some generalized certificate combinations along certified bioenergy supply chains 414
