
Acknowledgements

We would like to thank, first and foremost, the authors who have contributed to this volume both through their cooperation and willingness to observe deadlines and make revisions, and their delivery of high quality and accessible chapters.

Giles Atkinson would like to thank his fellow Members and the Secretariat of the UK Natural Capital Committee for many fruitful discussions about sustainability and natural capital, much of which has helped shape thinking about the appropriate focus for this second volume.

Simon Dietz would like to acknowledge the financial support of the Grantham Foundation for the Protection of the Environment and the ESRC Centre for Climate Change Economics and Policy.

Matthew Agarwala would like to acknowledge the generous support of the LSE Geography and Environment Department. He thanks his students and colleagues at the LSE, UEA and KCL for their insightful discussions, and is grateful to SU for unfailing patience and support.

Finally, we would also like to express our appreciation to all at Edward Elgar Publishing for the continued faith shown in this endeavour as well as this book's publishing editors, Alexandra O'Connell and Tori Nicols, and copy-editor Yvonne Smith.

We thank the following for permission to reprint or use material:

University of Chicago Press for the use of Figure 7.1 in Chapter 7. This originally appeared in Norton, B. (2005) *Sustainability: A Philosophy of Adaptive Ecosystem Management*, University of Chicago Press, Chicago.

Material in Chapters 2 and 22 by Kirk Hamilton and Esther Naikal, and Chapter 21 by Glenn-Marie Lange appears by kind permission of The World Bank.

Figure 30.6 appears with kind permission from Springer Science and Business Media. It was adapted from Figure S-7 (in supplementary material) from Cherp, A., Jewell, J., Vinichenko, V., Bauer, N. and Cian, E. (2013), 'Global energy security under different climate policies, GDP growth rates and fossil resource availabilities', *Climatic Change*, pp. 1–12.
