

Acknowledgements

This book is the result of a selection of updated papers that were presented at the Eighth IUCN Academy of Environmental Law (IUCNAEL) Colloquium in Ghent (Belgium) from 14 to 17 September 2010 on the topic of 'Linkages between biodiversity and climate change'.¹

The authors thank the secretariat of IUCNAEL, its Director and Chair, the members of the Governing Board, as well as the more than 150 presenters, the chairs of the 34 panels and the 47 authors who subsequently submitted papers for this publication, all of them contributing to the success of the Colloquium. We are grateful for the support of the IUCN Commission on Environmental Law, the then chair, Sheila Abed, and Alejandro Iza, Head of the IUCN Environmental Law Programme and the Director of the IUCN Environmental Law Center.

The organization of this Colloquium would not have been possible without the institutional and financial support of Ghent University, in particular its Vice Chancellor, Professor Paul Van Cauwenberge, the Law School of Ghent University and its Dean, Piet Taelman, the City of Ghent, the Flemish Department of Foreign Affairs and the United Nations Association Belgium/Flanders. A special thanks goes to the United Nations Environment Programme for providing financial support to colleagues from countries in development to attend the Colloquium.

¹ The papers were reviewed by editorial committee members. The contributors were allowed to update the papers that were then again internally peer reviewed.
