Acknowledgements

The idea for this book was prompted by the inspirational conference on science and human rights organized by the American Society for the Advancement of Science in January 2009. The original outline for the book in 2009 drew enthusiastic support from Ben Booth. I am immensely grateful to Edward Elgar for their unwavering commitment to the project and for the assistance of editorial production team. The conference itself led to the AAAS launch of a coalition on science and human rights. As a member of the coalition, I have had the benefit of participating in meetings and feeding into reports, which have enriched my thoughts on the interface between science and human rights. I am particularly grateful to Jessica Wyndham, Audrey Chapman and Mark Frankel. In 2011, the Brocher Foundation generously funded a visiting fellowship, which enabled me to work on archival sources at the United Nations library in Geneva to retrace the drafting history of Article 27 UDHR and Article 15 ICESCR and share my thoughts with other visiting scholars in the social and natural sciences in a truly outstanding environment. I was also able to discuss my thoughts on the moral foundations of human rights and capabilities with Ruth Faden, Roger Crisp, Julian Savulescu and many other philosophers at the Uehiro Centre for Applied Ethics at the University of Oxford, which I visited with the support of a grant from the Wellcome Trust in 2012. Chapter two benefited from Sridhar Venkatapuram’s comments and insights into health justice and capabilities.

Over the years, I have had numerous discussions with patent attorneys, officials at the UKIPO and EPO, intellectual property scholars, human rights scholars, scientists, postgraduate students and research fellows as part of projects funded by the European Commission. They are too numerous to list individually but interactions with Rowena Dinham, Jihun Cho, Graeme Dinwoodie, Christopher Geiger, Geertrui Van Overvalle, Trevor Cook, Marianne
Levin, Asa Hellstadius and Joseph Straus have all helped advance my thoughts on the patent system.

I completed the final draft of the book when visiting the European University Institute as a Fernand Braudel Senior Fellow in the autumn of 2014. The primary purpose of my visit was to research the unitary patent system and human rights in Europe, but the congenial and exceptionally stimulating intellectual environment helped me bring the book to a conclusion.

The book is dedicated to my husband, Ian and my children Seumas and Fiona for their encouragement, good humour and stoic toleration of my journey through the rollercoaster trajectory of this book.
