Acknowledgement

The work for this book started in the year 2010 when we began a new research project on ‘Innovation and Defence Industrial Policies’, as part of the Norwegian Research Council’s FORFI programme. The project was a collaboration between the Norwegian Institute of International Affairs (NUPI), the Nordic Institute for Studies in Innovation, Research and Education (NIFU) and the Norwegian Defence Research Establishment (FFI), and it ran throughout the period 2010–2013. The project carried out an investigation of the Norwegian defence industry, with a special focus on the innovativeness and international performance of the companies operating in this market, and how these factors are shaped by innovation policy support, on the one hand, and defence industrial policy, on the other. Financial support from the Norwegian Research Council (FORFI programme) and from the Norwegian Ministry of Defence is gratefully acknowledged. We also acknowledge NUPI, NIFU and the FFI for their financial and infrastructural support as well as their efficient and friendly working environments.

We later continued and extended this research endeavour, and the above mentioned project and subsequent research resulted in articles published in international peer-reviewed journals since 2013:

(1) F. Castellacci and A. Fevolden (2014), ‘Capable companies or changing markets? Explaining the export performance of firms in the defence industry’, *Defence and Peace Economics*, 25 (6), 549–575.

(2) F. Castellacci, A. Fevolden and M. Lundmark (2014), ‘How are defence companies responding to EU defence and security market liberalization? A comparative study of Norway and Sweden’, *Journal of European Public Policy*, 21 (8), 1218–1235.

(3) M. Blom, F. Castellacci and A. Fevolden (2014), ‘Defence firms facing liberalization: Innovation and export in an agent-based model of the defence industry’, *Computational and Mathematical Organization Theory*, 20 (4), 430–461.

(4) M. Blom, F. Castellacci and A. Fevolden (2013), ‘The trade-off

between innovation and defence industrial policy', *Technological Forecasting and Social Change*, 80 (8), 1579–1592.

We wish to thank the publishers of these journals for allowing us to reprint parts of these articles in some of the chapters of the present book. And we would also like to acknowledge the invaluable contribution that our co-authors Martin Blom and Martin Lundmark made to the relevant articles, and the friendly and stimulating discussions we had with them while working on this research. In addition, we want to extend our gratitude to Kari Tvetbråten, who was part of the FORFI project and provided highly appreciated support and inputs throughout the project. Finally, we want to thank Olav Wicken and Helge Ryggvik for insightful comments and suggestions on the manuscript, and Ragnhild Bjelland-Hanley for doing an excellent job of correcting our misspelled and misplaced references.

Some of the drafts of the chapters presented in this book were presented at various international workshops and conferences: 'Innovation and internationalization in the defence industry' (Oslo, August 2011); 'SKIN model workshop' (Koblentz, June 2012); 'Governance for a complex world' (Nice, November 2012) and 'Innovation and defence industrial policies' (Oslo, March 2013). We wish to thank all participants for the very helpful comments and suggestions on the previous drafts of these chapters, and in particular Petra Ahrweiler, Francisco Fatas Villafranca, Nigel Gilbert, Paul Nightingale, Alessandro Nuvolari, Andreas Pyka and Marco Valente.

Last but not least, we are grateful to our families for the continued and unconditional moral support and for the extra working time we were able to devote to this project.
