Acknowledgments

My interest in intellectual property and innovation policy for cleantech development and transfer started when Richard Wilder shared his observations of the gridlock concerning cleantech IPR during the UNFCCC negotiations.

Upon hearing my first public talk on the research, Stephen Gutierrez from Edward Elgar Publishing initiated a book contract. Joshua Sarnoff supported the book project and has encouraged me along the way.

During the research and development of the book: Stephen Yandle affirmed and encouraged the idea of providing a pathway enabling developing countries to move toward domestic cleantech innovation. Francis Snyder encouraged and affirmed my work along the way and provided consistently helpful input per his broad expertise including international trade and WTO law. Edward Lee and Francis Snyder generously line-edited portions of the writing. Stephen Minas provided consistently helpful input per his good knowledge and engagement with the UNFCCC regime and reviewed the final manuscript. Peter Yu followed the evolution of the research and offered detailed and instrumental input to the entire manuscript. Francis Snyder and Abbe Brown reviewed the whole manuscript on short notice and provided detailed and instrumental comments. Jorge Contreras offered helpful insights on the competition law discussion.

I further appreciate the input from all colleagues who attended my talks on the research during conferences and workshops in the US, Europe and Asia. Among those, I especially thank Philip McConaughay, Mark Feldman, Douglas Levene, Norman Ho, Robert Merges, Peter Menell, Kung-Chung Liu, David Schwartz, Christopher Buccafusco, and Sungjoon Cho for their support and input. Finally, I would like to express my sincere gratitude to Connie Ni and Charlie Xu, my able and responsible research assistants, and Jacquelyn Harmeling for her excellent editing of the manuscript's writing details.

This monograph is the author's first book. The author learned much in the process and thanks to David Fairclough, Jane Bayliss and Katia Williford at Edward Elgar Publishing for their seamless teamwork. All remaining oversights are mine and will be updated once noted. May this book contribute to us shooting the moon together; that is, building a sustainable future on this earth for us and ours.
