1 Introduction	1
2 Measuring health	6
2.1 Objective health measures	6
2.2 Subjective health measures	15
2.3 The relationship between objective and subjective measures of health	20
3 Measuring inequality	22
3.1 Income inequality or other metrics?	23
3.2 Which income measure?	25
3.3 Inequality over which time frame?	27
3.4 Inequality between households or individuals?	28
3.5 Which statistical measure of inequality should be used?	29
3.6 Assessing inequality differences within and across countries	33
4 How can economic inequality influence health?	38
4.1 Five possible mechanisms behind the inequality effect	39
4.1.1 Mechanism 1: social comparisons	40
4.1.2 Mechanism 2: lower trust	42
4.1.3 Mechanism 3: political mechanisms	43
4.1.4 Mechanism 4: violence and crime	43
4.1.5 Mechanism 5: purchasing-power effects	44
4.2 Is all inequality bad?	44
4.3 Summing up	46

5	Correlation or causality? Interpreting scatter plots and regressions	48
5.1	Do higher incomes lead to better health or does poor health lead to lower incomes?	51
5.2	Addressing spurious correlations	56
5.3	The importance of economic significance	58
5.4	Interpreting statistical inequality effects on health: an empirical example	59
5.4.1	Using cross-country variation to analyse inequality and health	60
5.4.2	Using longitudinal variation to analyse inequality and health	65
5.4.3	Analysing changes over extended time periods	67
5.5	Conclusions	70
6	The ecological fallacy: what conclusions can be drawn from group averages?	72
6.1	How can the three effects be differentiated?	78
6.2	The difficulty of choosing a reference group	79
7	Income inequality and health: what does the literature tell us?	82
7.1	The inequality effect in single countries: objective health outcomes	85
7.2	The inequality effect in single countries: subjective health outcomes	88
7.3	Is there a delayed inequality effect on health?	93
7.4	Is everyone affected equally by the inequality effect?	95
7.5	Cross-country studies of the inequality effect	97
7.6	Studies of the relative income hypothesis	100
7.7	Conclusion: what does the existing research tell us?	102
8	Searching for the inequality effect: which tools are appropriate?	107
8.1	Social comparisons	108
8.2	Social trust	108
8.3	Political mechanisms	109
8.4	Violence and crime	109
