

Figures

I.1	The sustainable development triangle	5
1.1	A safe and just space for humanity to thrive in: a first illustration	20
1.2	From human activity to climate change to human wellbeing	28
1.3	Scenarios projecting impacts of environmental risks on human development to 2050	34
2.1	A theory of human need: universal goals, basic needs, intermediate needs, satisfiers and societal preconditions	43
3.1	Global CO ₂ e emissions per region, from 1820 to today	65
3.2	Comparing GDP and the Genuine Progress Indicator (GPI)	72
3.3	The impact of a consumption-based view on emissions by country	73
3.4	Greenhouse gas emissions associated with UK production and consumption 1990–2010: territorial and footprint emissions compared	74
3.5	Global distribution of consumption-based emissions	78
4.1	Life expectancy and consumption-based emissions, with enlarged view of countries in ‘Goldemberg’s Corner’	90
6.1	Indicative UK decarbonisation roadmap	128
6.2	Average UK weekly expenditure on fuel, light and power, and income, 2011	137
6.3	From social policy to eco-social policy	144
7.1	Scenarios for greenhouse gas emission from private consumption in Sweden, 2012–50	147
7.2	Per capita consumption-based emissions by category, UK, 2006	150
7.3	Per capita GHG emissions, and emissions per £1 of income, by income decile, UK, 2006	151
7.4	UK household GHG emissions in the reduced consumption scenario	156
9.1	Typologies of capitalism, welfare states and climate mitigation strategies	202
