Acknowledgments

The completion of this book is testament to the strength of collective energies, ideas, skills and determination. The book began its journey pre-pandemic and then stalled in its progress while we took the time to focus on other priorities. We returned to the project with renewed energy in early 2021 and we are now happy to present our thoughts and ideas to you. As with any project, it could not have been completed without the support of others who contributed their valuable time, enthusiasm and intellect to the completion of our work. Bernadette would like to thank Melissa de Zwart, who was here at the beginning and helped to crystallise the vision of our book but who, unfortunately, had to withdraw from the project. Without Melissa's support and input, the book would not even have been able to begin. Bernadette also had the support of research assistants Joel Lisk and Liam Thatcher and valuable feedback from colleagues at the University of Bristol Law School and Centre for Ethics in Medicine. Bernadette and Susannah would also like to acknowledge their research teams and the support from two grant projects: NHMRC Ideas Grant, 'The algorithm will see you now: ethical, legal and social implications of adopting machine learning systems for diagnosis and screening', APP1181960, and Australian Research Council Discovery Grant, 'Support or Sales? Medical Device Representatives in Australian Hospitals', DP200100883. Mark would like to thank colleagues who commented on early drafts of the chapters for which he took the lead: Karin Clark, Tatiana Cutts, Jeannie Paterson, Minna Paltiel, Megan Pricor, Megan Richardson and Tess Whitton.
