Acknowledgements

I owe a debt of gratitude to many people who have helped me over the years, who have inspired me, and have co-authored published work with me, including some works I have drawn on heavily in this volume.

On a personal level, I thank my wife Liz Low who was publishing her own book (Eaglehawk Girl) while my mind was given over to writing this book. I’d also like to thank my daughter, Ciannait Low, for her work on the cover design.

I learn from working with others. It has been a privilege to engage in this co-learning process: Farid Ahmed, John Dee, Michael Easson, Crystal Legacy, Alan March, Imran Muhammad and Sophie Sturup. I owe a special debt in this book to my long-time colleague and collaborator, Brendan Gleeson, with whom I developed the ideas of environmental justice that appear in this book. I thank Carey Curtis for our joint work on transport sustainability in which we explored the concept of path dependence. I thank Sophie Sturup for working with me on the Being of planning and the planner. These are very special friends whose indispensable contribution to the book I warmly acknowledge.

I also want to acknowledge two influential friends and scholars with whom I have published work. Imran Muhammad, who first introduced me to the concept of path dependence, and Trevor Tyson, who introduced me to the surprising world of group dynamics and experiential learning.

It will be obvious from the many footnotes and references in the book that very many scholars have contributed ideas on which I have drawn. In this respect I am proud to be a small part of a constellation of thinkers, researchers and writers, past and present. But there are a few stars in this network who especially inspire me and fill me with enthusiasm. I have continually looked to David Harvey for his unwavering commitment to social justice, and to Val Plumwood for principles of ecological justice. Andreas Faludi’s work on planning process remains of great value. Two more recent stars in this galaxy of scholarship are Thomas Piketty for his extraordinary empirical account of the fall and rise of inequality, and Bruno Latour for his innovative way of thinking about geopolitics. Greta Thunberg, provides a beacon of hope for the future of humankind. Long may she shine.

To some extent this book is a story of my intellectual development, and in that process I have had mentors who have supported and encouraged me in the study of planning. For this important mentor role I want to thank Brian...
Acknowledgements

Thomson while at the Universidad Nacional del Nordeste, Argentina; Sean Damer and Jim Milligan at Strathclyde University; and Dennis Franzini, my boss at the London Borough of Hillingdon. Arriving at the University of Melbourne, Fred Ledgar, founding Professor of Planning, welcomed and looked after me as a new migrant. Then, as I started to do research at the university, John Power mentored my first excursions into political science and public policy. Pat Troy helped me win a scholarship at Australian National University to study planning in the Australian states, on which I worked with Brendan Gleeson. Tony Eddison and Sue Barrett helped me during a stay at the School for Advanced Urban Studies, Bristol University. During periods of study leave in Sweden, Abdul Khakee at the University of Umea, and Ingemar Elander at Orebro University were my mentors. I also want to thank Lachlan Ross, who shepherded me through the thickets of Heidegger’s ontology with the skilful use of a whiteboard.

For the last 46 years the University of Melbourne, and what is now the Planning Programme in the Faculty of Architecture, Building and Planning, has been my place of scholarship, providing me with a beautiful city campus in which to teach and learn. Of course, we migrants are newcomers to this ancient land and its indigenous people. I therefore acknowledge the Wurundjeri people who are the Traditional Custodians of the Land on which the University of Melbourne stands. I pay respect to the Elders both past and present of the Kulin Nation and to the indigenous people of Australia.

There are some leaders in the faculty I want especially to thank: Ruth Fincher, Ross King, Brian McLoughlin, David Yencken and the current Dean, Julie Willis.

A generous and important contribution to the faculty, and my own learning, was the grant my colleagues and I won from the Volvo Research and Educational Foundations (VREF) of Sweden to fund and maintain the Australasian Research Centre for Government and Management of Urban Transport (GAMUT). I want to recognise the whole GAMUT team: my co-directors, Bill Russell, who went on to found Rail Futures in Victoria (an influential lobby for sustainable transport), and Leigh Glover who continues to publish work on sustainability and climate governance. The team included, in alphabetical order: Paul Barter, Matthew Burke, Carey Curtis, Jennifer Day, Brendan Gleeson, Mikael Granberg, Pan Haixiao, Damon Honnery, Anthony Kent, Paul Mees, Fujio Mizuoka, Patrick Moriarty, Kevin O’Connor, Jan Scheurer, Sun Sheng Han, John Stone, Sophie Sturup, Izumi Takeda, Carolyn Whitzman, Marcus Wigan and associated scholars: Kate Alder, Crystal Legacy, Tim Peterson, Julie Rudner, Sophie Sturup and Patrick Sunter. Our team benefited from the skilled office management of Leanne Murphy, assisted by Danielle Hearn. Our research centre was closely associated with the OMEGA Centre studying transport megaprojects (also funded by VREF)
at University College London led by Harry Dimitriou with whom I continue to co-edit the new Routledge Journal of Mega Infrastructure and Sustainable Development.

Finally, I thank the publication team at Edward Elgar: Katy Crossan, Stephanie Hartley, Sue Sharp and others who I have not yet encountered. It has been a pleasure to work with all of them and be guided by their wise suggestions. They have gently kept me on my toes and have been patient with my failure to meet my initial deadline.

The constellation of important people who have helped and influenced me is vast. The ‘Acknowledgement’ pages are the last piece of the book to be written. I’m aware that there will be some stars I have overlooked as I write, only to remember after the die is cast. To them I apologise and ask to be forgiven. My hope is that the work of the whole constellation of like minds will be advanced by publication of this book.

I direct readers to my online profile at the University of Melbourne where the list of all my publications can be found: https://findanexpert.unimelb.edu.au/profile/16214-nicholas-low. Also please go to the Companion Website to this book in which I add some evidence from contemporary reports and commentaries to support the theoretical observations in the book: https://www.e-elgar.com/textbooks/low.
