Acknowledgments

This book benefited from conversations with Dan Bromley and Dave Weimer at the University of Wisconsin when three of the authors were graduate students there. This includes conversations in Bromley's seminar on institutional economics and in Weimer's Political Economy course, which gave us a good view of the old and new institutionalism and of the property rights approach. Taylor Hall and North Hall, the buildings that housed the agricultural and applied economics and political science departments, were vibrant intellectual environments that encouraged a diversity of perspectives on commons.

We thank Pedro Bustamante, Marcela Gomez, Colin Harris, Tom Hazlett, Mike Madison, and Martin Weiss for many useful discussion about the commons, especially about how the resource and global commons contrast with the technology commons (such as the electromagnetic spectrum) and the knowledge commons. Vincent Geloso provided valuable suggestions on literature in Hardin's tradition and shared many insights into whale hunting and general insights about the market and resources. Pete Leeson gave us much to think about regarding Elinor Ostrom's works, especially how they differ from some of the other literature on the economics of anarchy. When one of the authors was visiting the Hoover Institution at Stanford, P. J. Hill shared his insights on American bison, Bruce Johnsen shared insights on the Pacific Northwest salmon fisheries of American Indian tribes, and Terry Anderson offered insights on cowboys—all of which have informed the book. Joe Austin and Adam Crepelle offered many insights into sustainable use of commons on American Indian reservations. On environmental governance, we benefited from conversations with Rob Holahan, Prakash Kashwan, and Derek Kauneckis. Nick Cowen shared many insights on the link between commons and markets. Mark Pennington shaped our understanding of environmental governance. We benefited a great deal from discussions with Eric Alston about institutions: what they are, how to define them, how they matter. On oil and gas, we thank Karen Clay, Lynne Kiesling, Tim Fitzgerald, Jeremy Weber, and Nick Parker.

Much of this book concerns polycentrism. We learned much from Paul Dragos Aligica and Vlad Tarko on the subject and continue to learn from them. Jennifer benefited from the opportunity to discuss the topic with Elinor Ostrom at the Workshop in Political Theory and Policy Analysis (now known as the Ostrom Workshop).

Over the years, many have contributed to our understanding of the topics covered in this book: Brad Barham, Dan Berkowitz, Rosolino Candela, Karsten Mause, Ennio Piano, Kay Shimizu, Keith Taylor, Randy Walsh, and Jeremy Weber.

Raufhon Salahodjaev owes an enormous debt of gratitude to Umurzakov Uktam Pardaevich for his valuable guidance and support during the process of writing the book. Raufhon also wants to acknowledge his research assistants, Arletta Isaeva, Shakhnoza Tosheva, and Anastas Khachaturov for helping with data collection.

Many thanks to Pete Boettke, editor of the New Thinking in Political Economy series at Edward Elgar, for selecting the book. Pete has been a wonderful mentor, and we have learned much about institutions from him and from his appreciation for a diversity of perspectives. We thank Alan Sturmer and Caroline Kracunas at Edward Elgar for supporting the project from start to finish and for shepherding the book through the publication process. The entire process at Edward Elgar was everything authors could ask for. We thank Harry David for his indexing service and for his excellent and careful reading of the manuscript and constructive, thoughtful suggestions on how to improve its clarity. We are grateful to the Charles Koch Foundation for funding our research activities.

Some of the arguments made in this book are based in part on the following publications:

Patience and Climate Change Mitigation: Global Evidence. *Environmental Research*, 2020 (by all four of the authors of this book).

More Boon than Bane: How the U.S. Reaped the Rewards and Avoided the Costs of the Shale Boom. *The Independent Review*, 24 (2), 249–272, 2019 (by Ilia Murtazashvili and Ennio Piano).

Governance of Shale Gas Development: Insights from the Bloomington School of Institutional Analysis. *Review of Austrian Economics*, 32, 159–179, 2019 (by Ilia Murtazashvili and Ennio Piano).
