Acknowledgments

The authors thank Prof. Pablo Collazzo for the care and attention he paid to the course of this work and in the development of the study. Prof. Collazzo shone brightly as a source of inspiration and encouragement, but was also a rigorous guide for academic discipline.

Of substantial importance to this study was the support of the chairman of the Finance and Investment Department at Imam Mohammed Islamic University in Riyadh, Prof. Mohammad Alsuhaibani, who also provided important inputs on the nature of sharia in the context of Islamic investing. Moreover, as chairman of the SABIC Chair in Islamic Financial Markets, Prof. Alsuhaibani helped this study benefit from a significant grant to support the first ever research on sharia-compliant security selection and asset allocation.

Further appreciation is noted for the generous contributions of time and information from senior asset management staff at Credit Suisse, UBS, Pictet, HSBC and Mirabaud, each providing valuable knowledge on their professional best-practices in identifying, sorting and filtering securities for their respective Buy Lists. These inputs helped establish what could be considered a universal methodology for this practice, firmly grounded in theory but constrained by regulatory and professional “prudent man” concerns.

Finally, a special thanks to Salman bin Abdullah Bin Saedan in Riyadh, without whose continued support this work would not have been completed.
