About the authors

Agatino Rizzo is the Chaired Professor and Head of Architecture at Luleå University of Technology, Sweden. He works at the intersection of planning, design and geography in contexts as different as the Arctic, Europe and Asia. His main interests are the study of the resource–urbanization nexus and how to transition from predatory to resourceful urbanism. His original theoretical production includes novel concepts such as the intra-rural divides, transdisciplinary urbanism, knowledge megaprojects, predatory urbanism and green resilience. Between 2009 and 2013, Agatino Rizzo worked as a scholar in Malaysia and Qatar. His work has been funded by the Qatar National Research Fund, the European Commission's Framework Programmes, the Swedish Energy Agency and Formas.

Anindita Mandal is a second-year doctoral candidate at Luleå University of Technology, Sweden. She has a Bachelor in Architecture from Mumbai University, India and a PhD in Architecture from the University of Auckland, New Zealand. Her main research interest is in the field of sustainable urban development and resource efficiency. In particular, her research has involved understanding and analysing human (psychological) factors affecting the development of urban settlements, in addition to the variety of planning factors.
