

Figures

2.1	Relationships between positions of approximately structurally equivalent actors in the strong coworkers' network	66
2.2	Collegial pockets and linchpins in a hierarchical, bureaucratic structure: religious orientations of the priests in a diocese as mapped on their advice network	75
2.3a	How do bankers exercise epistemic control in the court and dominate as multistatus oligarchs? Cyclical dynamics (centralization–decentralization–recentralization) of epistemic status in advice networks among all judges – network wave 1 at time 1	87
2.3b	How do bankers exercise epistemic control in the court and dominate as multistatus oligarchs? Cyclical dynamics (centralization–decentralization–recentralization) of epistemic status in advice networks among all judges – network wave 2 at time 2	88
2.3c	How do bankers exercise epistemic control in the court and dominate as multistatus oligarchs? Cyclical dynamics (centralization–decentralization–recentralization) of epistemic status in advice networks among all judges – network wave 3 at time 3	89
2.4	Context as multispin providing stability from movement in multilevel relational infrastructures	97
3.1	Real life, linked-design multilevel network of organizations (upper-level network), members (lower-level network) and affiliation ties (vertical) of the latter to the former	116
3.2	Intra-class density based on fish/pond relative status among scientists	118

3.3	Multilevel social niches in the superposed forms of division of work	120
3.4	Types of overlap between interindividual and interorganizational networks	127
3.5	Resilience of personal co-publication networks among scientists, in spite of 17 years of organizational turnover, change and dissolution around them	131
3.6	Organizational extension inducing access to dual alters: borrowing relational capital by closing a dual three-path and adding indirect contacts from one's boss's network to one's own	133
3.7	Dual alters as potential sources of resources and extended, multilevel opportunity structure	134
3.8	Network lift from dual alters: ascending three-level paraglider of vertical linchpin active at several levels simultaneously	137
3.9	Moving means of impact factor scores (1996–2005): six groups of performance levels for the researchers	138
3.10	Mapping the average effect of brokerage beyond group (in the extended network) and closure within group (in the actual network) on average performance for each of the six groups at the end of Period I	139
4.1a	The Venice Forum (VF) collegial oligarchy: three different networks of European judges measured at this field-configuring event – reading network among patent judges	191
4.1b	The Venice Forum (VF) collegial oligarchy: three different networks of European judges measured at this field-configuring event – discussion network among patent judges	192
4.1c	The Venice Forum (VF) collegial oligarchy: three different networks of European judges measured at this field-configuring event – reference network among patent judges	193
4.2	Network of “harmonizers”: nominations creating a collegial oligarchy of ex ante leaders personifying the future “uniform” European compromise at the VF	194
