<i>Prologue: 'Not even wrong'</i>	vi
<i>Acknowledgements</i>	vii
Introduction	1
1. Some problems with the aggregate production function	21
2. The aggregate production function: behavioural relationship or accounting identity?	45
3. Simulation studies, the aggregate production function and the accounting identity	99
4. 'Are there laws of production?' The work of Cobb and Douglas and its early reception	133
5. Solow's 'Technical Change and the Aggregate Production Function', and the accounting identity	160
6. What does total factor productivity actually measure? Further observations on the Solow model	191
7. Why are some countries richer than others? A sceptical view of Mankiw–Romer–Weil's test of the neoclassical growth model	213
8. Some problems with the neoclassical dual-sector growth model	234
9. Is capital special? The role of the growth of capital and its externality effect in economic growth	252
10. Problems posed by the accounting identity for the estimation of the degree of market power and the mark-up	266
11. Are estimates of labour demand functions mere statistical artefacts?	284
12. Why have the criticisms of the aggregate production function generally been ignored? On further misunderstandings and misinterpretations of the implications of the accounting identity	311
