Acknowledgements

Much of the material presented in this book originated from a joint project of the Scientific Committee on Problems of the Environment (SCOPE) and the United Nations Environment Programme (UNEP). The concept for this project was initially proposed by Hussein Abaza from the Economics and Trade Branch of UNEP’s Division of Technology, Industry and Economics. The project aimed to synthesize and assess the implications of new economic tools developed in the field of ecological economics for integrated assessment and policy planning at global and regional levels. During this project, there were a number of activities, seminars and regional workshops, also attended by some of the contributors to the present book.

This book would thus not have been possible without the active involvement, efforts and enthusiasm of the many people who participated in the SCOPE/UNEP project. In particular, we should like to thank Professor Robert Costanza, who chaired the Scientific Advisory Committee, Sylvia Tognetti (Project Officer), who also developed the project in consultation with many of the participants, and who conceived, assembled and produced a first version of this book, and Lisa Speckhardt, who provided editorial assistance in initial stages. Silvio Funtowicz was particularly helpful in the initial phase of project development, in identifying important issues that might be addressed, and existing research efforts that might have otherwise been overlooked. Professor Bedrich Moldan, Professor Ted Munn, Professor Richard Norgaard and other, anonymous, referees provided valuable comments and suggestions on previous versions of some of the papers.

Several meetings and regional workshops organized within the SCOPE/UNEP project also contributed to the publication of this book. In particular, we are grateful to Peter May and Marilia Pastuk, from PRO-ECO (the Programme in Ecological Economics and Agrarian Policies of the Univesidade Federal Rural do Rio de Janeiro) who organized seminars and planning meetings in Campo Grande and Cuiabá, together with the project officer. In Campo Grande the meeting was hosted by SODEPAN (The Society for the Defense of the Pantanal) with the assistance of Edson Cardoso (former director of SODEPAN), UCDB (the Dom Bosco Catholic University) and the Fundação Pantanal, which is part of the Environment Ministry of Mato Grosso do Sul. The seminar in Cuiabá was hosted by Ecotropica. Participants in-
cluded representatives from regional research institutions and non-govern-
mental organizations, including the Centro de Pesquisa Agropecuária do
Pantanal (EMBRAPA/CPAP) and the Federal Universities of Mato Grosso do
Sul. The first regional workshop was held in the Pantanal region of Brazil,
and included the presentations of papers on individual methods in the context
of case studies. The aim of the workshop was to review computational ques-
tions, integrating ecological and economic theory and models, time- and
space-scale issues, and interactions among the different stakeholders. The
second regional workshop focusing on modelling aspects was held in Boston,
USA. As a case study, special attention was given to land management by the
US army, which also sponsored the workshop, through the US Army Envi-
ronmental Policy Institute.

We should also like to thank Véronique Plocq-Fichelet, SCOPE Executive
Director, J.M. Melillo, SCOPE Executive Committee President, and Profes-
sor Philippe Bourdeau, SCOPE Past President for their active involvement
during this project.
