

Figures

1.1	Basic case of supply and demand for water	2
2.1	Comparison of Pareto-efficiency and benefit–cost criteria	23
2.2	Price and quantity effects and change in economic surplus from non-marginal shift in supply of water	27
2.3	Change in economic surplus from non-marginal change in water supply	28
3.1	Optimal consumption and deadweight losses if water is underpriced	47
3.2	Typical market and non-market values for water in the western United States	49
3.3	Range of price elasticities of demand for water in the United States	52
3.4	Schematic representation of the definitions of use cost and opportunity cost	56
3.5	The relative magnitudes of use costs and opportunity costs for urban water supply	57
3.6	Relative efficiency of different American and Spanish water management procedures when water to an irrigation district is reduced by 10 per cent	60
3.7	Measures of equality – the Gini coefficient	61
3.8	The equity of different water allocation systems	61
3.9	Illustrative values of use and opportunity costs for urban supply and irrigation opportunity costs	62
3.10	The relative magnitudes of use costs and opportunity costs for irrigation	63
3.11	Schematic representations of deviation from economic pricing for urban water supply	63
3.12	Schematic representations of deviation from economic pricing for irrigation	64
5.1	Dike enclosures and safety levels in The Netherlands	94
5.2	Gross domestic product (GDP) in millions of euros generated within areas situated below sea level and protected from flooding by dike enclosures in 2000	95
5.3	The Meuse river basin divided into an unprotected and protected part	102

5.4	The financial value of total damage at a river discharge of 4600 m ³ /s (price level 2002)	102
5.5	Distribution of the total current damage costs in the protected and unprotected part across various damage categories (in percentages)	103
5.6	Expected increase in flood probabilities as a result of climate change for the area protected and the area not protected by dikes	104
5.7	Distribution of the total costs across the area protected and the area not protected by dikes in billions of euros (price level 2002)	105
5.8	Location of the Lower River Delta in The Netherlands	109
5.9	Dike enclosures examined in the follow-up study	115
5.10	Location of the flood disaster areas for the Rhine proposed by the Commission Luteijn	116
5.11	Dike enclosures which are expected to flood as a result of a dike breach	117
6.1	Location of the Skjern river project area	126
7.1	Map of the Stockholm Archipelago	160
7.2	Physical relationships underlying the Stockholm Archipelago CBA study	161
7.3	The river basin for the Stockholm Archipelago divided into six catchments	163
7.4	Contribution of each of the six catchments to their adjacent catchments and to the Stockholm Archipelago	164
7.5	Valuation scenario and WTP questions used in the contingent valuation survey	170
8.1	Drainage basin of Thessaloniki bay	180
9.1	Great Lakes' Areas of Concern	204
9.2	Hamilton Harbour	206
11.1	Potential sources of bathing water quality deterioration	253
11.2	Estimated relative contribution of bathing water pollution sources to the overall problem of bacteriological bathing water contamination	258
11.3	Proposed cost-effective measures at the different bathing water locations and their relative contribution to solving bathing water quality problems at the sample sites (percentage of sites at which the measures were proposed)	259
11.4	Cumulative probability function of 'yes' replies to the WTP question	266
13.1	Location of the case study	292

13.2	Development of the chloride concentration in the reference scenario	297
13.3	Development of chloride concentration and related benefits in time	298
13.4	Location of agricultural wells used for irrigation and the extent of chloride pollution	304
14.1	Overall evaluation strategy applied to the Kouris watershed in Cyprus	322
14.2	The Kouris catchment in Cyprus	323
15.1	Location of the Doñana National Park in Spain (Andalusia)	352
16.1	The Federal District and the study zones	367
16.2	Benefits of the maintenance and improvement scenario	369
