

Tables and boxes

TABLES

1.1	Subsidies to water (\$10 ⁹ 1990s, per annum)	3
1.2	The role of costs and benefits in EU environmental Directives in the UK and The Netherlands	11
4.1	Total assets at risk in England and Wales (£ billion)	86
4.2	Benefit–cost ratios for flood protection in England	88
5.1	Costs and (net) benefits of various flood control alternatives in millions of euros (price level 2002) and benefit–cost ratios calculated under different assumptions	106
5.2	Expected impacts of managed realignment compared to a ‘do nothing’ baseline scenario	110
5.3	Present value of the costs and benefits of the proposed managed realignment measures compared to the ‘do nothing’ baseline scenario in billions of euros (price level 2000)	111
5.4	Economic values of wetland ecosystem characteristics	112
5.5	Present value of the costs and benefits of the proposed managed realignment measures compared to the ‘do nothing’ baseline scenario, including the non-priced socio-economic benefits, in billions of euros (price level 2000)	113
5.6	Costs of different measures to cope with residual risk in millions of euros (price level 2000)	116
5.7	Costs and benefits of structural and emergency strategies in millions of euros (price level 2000)	118
6.1	Present value of investment costs in constant (2000) prices	131
6.2	Arable land rents in the project area	133
6.3	Present value of land rents forgone due to land use changes (price level 2000)	134
6.4	Benefit estimation of the economic value of biodiversity	145
6.5	Cost–benefit results of the Skjern river project	146
7.1	Government and non-government organizations and agencies included in the survey	154
7.2	Use of CBA in governmental and non-governmental organizations in Sweden during the period 1997–2001	155

7.3	Nitrogen emissions from different sources within the six Stockholm Archipelago river basin catchments in tons per year	163
7.4	Abatement costs at source and recipient water body for various abatement measures (price level 1998)	167
7.5	Nutrient abatement and associated costs to achieve a 1-metre Secchi-depth improvement with the help of various measures (price level 1998)	168
7.6	Computation of aggregate WTP based on the contingent valuation study	171
8.1	EU population connected to sewerage system	178
8.2	Total costs of existing WWTPs (1999 prices, in million €)	183
8.3	Total cost of WWTPs in Halastra and Kilkis (1999 prices, in million €)	183
8.4	Willingness to pay amounts categorized according to different motivations	188
9.1	Major remedial efforts for Hamilton Harbour RAP	208
9.2	Costs of major remedial actions for Hamilton Harbour	209
9.3	Estimated annual aggregate benefits of major remedial actions for Hamilton Harbour	217
10.1	Economically significant rules affecting surface water quality	230
10.2	Benefits categories and valuation methods of economically significant rules	237
11.1	Number of current and future bathing water locations which do not meet existing and future bathing water quality standards	252
11.2	Results from the assessment of sources of pollution of bacteriological contamination at bathing water sites	256
11.3	Overview of estimated investment and operating costs at the different bathing water locations (price level 2002)	261
11.4	Mean WTP values for users and non-users (price level 2002)	266
12.1	Outcome of the payment principle question	277
12.2	Summary of mean WTP and net present value of the benefits of the revised EC Bathing Water Directive	278
12.3	Multilevel modelling results for WTP in principle and WTP amounts	281
12.4	Cost compliance assessment – Directive revision scenarios	285
12.5	Net present costs of the EC Bathing Water Directive revision scenarios (aggregated for English and Welsh bathing waters)	286
13.1	Alternative options and their costs for the Colmar drinking water utility and their customers under two water management scenarios (in € million, 2002 prices)	302

13.2	Net benefit estimation of the accelerated clean-up scenario compared to the reference scenario (in € million, 2002 prices) assuming low and high estimates for some of the benefit estimations	309
13.3	Estimates of the range of net present values of the net benefits of the accelerated clean-up scenario (in € million, 2002 prices) using various discount and growth rates	310
14.1	Water consumption in the major water schemes in Cyprus (in millions m ³ in 1994)	324
14.2	Estimated price and budget elasticities of household water demand	329
14.3	Estimated risk premiums and marginal input productivity	330
14.4	Welfare and welfare improvement under the optimal control and common property regime	333
14.5	Resource rents under the optimal control and common property regime	334
15.1	1980 CBA guidances of the Ministry of Public Works and Urban Planning (formerly the Ministry of Development)	343
15.2	Project appraisal for Cohesion Funding and major ERDF projects	345
15.3	Total operating income and margin in the National and Natural Park of the Doñana in the period 1996–97 (in thousand euros)	357
16.1	Aggregate annual costs and benefits of applying the maintenance, improvement and reliable service options in Mexico City (billion pesos; 2002 prices)	371

BOXES

5.1	Formal procedural steps for setting up a CBA for large infrastructure projects	100
9.1	Costs and benefits of the Oldman dam	199
9.2	The costs and benefits of sediment remediation in the English–Wabigoon–Winnipeg river system	201
15.1	Calculating the economic value of water in Navarra	349
15.2	Optimizing the economic value of irrigation water in Andalucia	351
