

Figures

3.1a	Early knowledge level and dispersion as functions of IT costs	54
3.1b	Final knowledge level and dispersion as functions of IT costs	54
3.2	Re-scaled knowledge levels over time as a function of IT costs	55
3.3	Knowledge type dispersion as a function of IT costs	57
3.4a	Network statistics as functions of IT costs; 100 rounds	58
3.4b	Network statistics as functions of IT costs; 1000 rounds	58
4.1	Effect of a change in average marginal costs on the number of firms	71
4.2	Profits and costs of investing in e-business practices	75
4.3	The number of active firms and number of users of e-business	79
4.4	Profits of an early adopter	80
4.5	Profits of a non-adopter that remains in the market	81
4.6	Firm size (after adoption) and time of adopting the new technology	82
4.7	Relative net difference in profits	83
4.8	Increased competition and time of adoption	84
5.1	The iso-profit relationship (with zero profit)	94
5.2	Licence fees in 3G auctions in chronological order	104
7.1	Professional structure of FLOSS developers	160
7.2	Monthly gross income of FLOSS community members	161
7.3	Country-based mobility balances	162
7.4	Time spent on development: FLOSS vs proprietary software	163
7.5	Direct and indirect rewards from FLOSS: 'Do you earn money from FLOSS, either directly or indirectly?'	168
7.6	Reasons to join and reasons to stay in the FLOSS community	169
8.1	Conditions for burnout	190
8.2	Fixed aspired production level	192
8.3	Flexible aspired production level	193
8.4	Technological change	194

9.1	Price discrimination	207
11.1	The market equilibrium of the model	252
11.2	Determination of the tightness ratio θ of the market equilibrium	257
11.3	The central planner's local optimum with the lower unemployment rate is better	261
11.4	Unique or multiple x-best equilibria	265
12.1	Annual change in deflator for information processing equipment and software relative to deflator for total private fixed investment	275
12.2	Value added produced by ICT sectors as percent of non-agricultural business sector output	277
12.3	ICT investment as a share of total non-residential investment	279
12.4	Contribution of ICT capital use to GDP growth	279
12.5	Share of innovating firms	285
12.6	Availability of venture capital	287
12.7	Indicators of product and labour market regulation	291
12.8	Employment growth over 5 years of entry cohort	293
12.9	Indicators of micro-level dynamics	294
12.A1	Reaction functions for a stable equilibrium	303
13.1	The steady state	313
13.2	Simulation results for the market solution	317
13.3	Simulation results for the social planner's solution	319
