

Tables

6.1	Summary statistics for northeast counties as origin counties	85
6.2	Percent of northeast out-migrants making improving moves, by migration factor	86
6.3	Out-migration estimation results for the northeast counties	89
7.1	Amenities present in nonmetropolitan commuter zones with the highest scores on each amenity index	104
7.2	Ordinary least squares estimates from regression of change in the absolute well-being index, 1980–2000, on amenity and control variables	106
7.3	Ordinary least squares estimates from regression of change in the relative well-being index, 1980–2000, on amenity and control variables	108
8.1	Percent county population change	115
8.2	American Northwest net migration models	118
8.3	1990–2000 net migration models	120
8.4	Why did you move to this county?	121
8.5	Relative importance of factors in decision to move or to stay in area	122
8.6	Stepwise discriminant analysis	123
9.1	Construction of amenity variables	140
9.2	Amenity growth models	143
10.1	Descriptive statistics of final clusters	165
10.2	Results of the regression analysis	168
11.1	Population change, net migration and natural increase for recreation counties by adjacency status, nonmetro and metro areas, 1970 to 2003	183
12.1	Participant characteristics	201
12.2	Summary of content categories created from photographs and narratives	203
13.1	Comparing respondents' level of community attachment	226
13.2	Number of friends and family, by type of resident	227
13.3	Percentage of neighbors that are other type of resident	227
13.4	Multiple regression analysis of community attachment, number of friends and socializing with permanent residents, seasonal homeowners	229

13.5	Likelihood of having any family ties and friendship or family ties with permanent residents in the community, seasonal homeowners	231
14.1	Effectiveness ratings of land-use planning policies and techniques	247
14.2	Analysis of variance (ANOVA) results comparing community response patterns on effectiveness measures of land-use planning policies and techniques	250
14.3	Analysis of variance (ANOVA) results comparing county personnel with city personnel response patterns on effectiveness measures of land-use planning policies and techniques	252
14.4	Analysis of variance (ANOVA) results comparing response patterns on effectiveness measures of land-use planning policies and techniques by job category	253
15.1	Measurement of key variables	268
15.2	Views of growth and development – seasonal and year-round residents	269
15.3	Views of growth and development – type and duration of residency	270
15.4	Anticipated consequences of managing growth and development among seasonal and year-round residents	273
15.5	Multiple correlation regression demonstrating relationships between land-owner characteristics, perceptions of community change, and attitudes toward growth management	274
16.1	Summer total phosphorus goals from lake management plan and actual averages for sampling stations in Long Lake	292
17.1	New farm-based and farm-related activities and their function, market potential and policy dependence in Europe	305
17.2	Contents and beneficiaries of Regional Action projects	312
17.3	Development interfaces addressed in Regional Action projects	313
