

Figures

2.1	The equilibrium dynamics of basic research employment	38
2.2	The equilibrium dynamics of effort in the science sector	39
2.3	Simulation of the effect of τ on steady state effort $\alpha = 0.3$	41
2.4	Simulation of the effect of τ on steady state effort $\alpha = 0.6$	42
5.1	Phase diagram	121
5.2	Policy function	124
7.1	Timing of events	150
7.2	No links	151
7.3	One link with a worker in a bad job	151
7.4	One link with a worker in a bad job with another link	152
7.5	Networks G_1 and G_2	153
7.6	Networks $G_A - G_F$	155
7.7	Output and inequality: empty network vs. complete network	157
7.8	Networks $G_G - G_H$	159
7.9	Networks $G_I - G_L$	160
7.10	Network G_M	160
10.1	The rate of growth $\gamma(\beta)$ in relation to the relative weight of the public consumption	214
10.2	Comparison between the rate of growth $\gamma(\tau, \beta > 0)$ and the rate of growth $\gamma(\tau, \beta = 0)$	214
10.3	The optimal income tax rate and the optimal share of productive investments	217

10.4	The optimal tax rate τ^* , the optimal rate of growth $y^*(\tau)$ and Barro's growth rate $y^\circ(\tau)$ in relation to income tax rate	218
11.1	Effects of an increase in the government deficit on the rate of growth, the tax rate and wealth distribution	231
12.1	Example of trade balance with ε/a set to an exemplificative 0.5	248
12.2	The shape and position of the aggregate demand curve in the (u, ψ) space depend on the saving propensities, export, import, and the debt ratio, b	252
12.3	Interest rate reduction	256
12.4	Weakening wage demand in a profit-led system	258
12.5	Weakening wage demand in a wage-led system	258
14.1	Multiple equilibria and poverty trap	292
14.2a	Multiple equilibria with $\tau_2 > 0$	293
14.2b	Multiple equilibria with $\tau_2 < 0$	294
14.3	Long-run dynamics in the presence of a redistributive policy: equilibrium combinations of k and τ_2	295
14.4	The effects of an increase of τ_2 on the stable and unstable equilibria	298
