Figures

6.1 Changes in investment, aggregate supply and aggregate demand
6.2 Upward instability
6.3 Upward instability (continued)
6.4 The upper turning-point
6.5 Actual growth vs natural growth
6.6 The full employment ceiling hypothesis about the upper turning-point
6.7 The non-ceiling hypothesis about the upper turning-point
8.1 Optimising political preferences
8.2 Alternative political preferences
9.1 Short-period utilisation possibilities doubling up for long-period accumulation possibilities
9.2 Salter’s ‘best-practice’ iso-quant, assuming constant returns to scale
11.1 Estimated density function for the productivity level ratios (R)
11.2 Stochastic kernel for 5-yearly transitions for the productivity level ratios
11.3 Ergodic distribution from the stochastic kernel
11.4 Stochastic kernel for the distribution in 1995 and the steady-state distribution from model estimates
11.5 Stochastic kernel: IRTS conditioning
11.6 Stochastic kernel: small RTS conditioning
11.7 Stochastic kernel: large RTS conditioning
15.1 China has significantly increased its investment in human capital
16.1 Rural poverty, GDP and capital formation
16.2 Short-run impulse responses
17.1 Some data for Brazil (1994–2004)
17.2 Macroeconomic framework of developing countries with high external indebtedness
17.3 Capital–output coefficient in Brazil (1950–2002)
17.5 Expected dynamics of public debt as a ratio to GDP in Brazil under the alternative economic policy model
