Brown, Gordon (Chancellor of the Exchequer), on the equity gap 161
Brown, S. 56
Bruno, A.V. 3, 16
business angel academies, entry route for virgin angels 72
instrument for latent angels and promoters of informal market 61, 71
new area for business schools 64–5
participants not only virgin or latent business angels 67–8
Business Angel Academy (BAA), active and passive business angels, male between 35 and 55 65
business angel investment activity, elements that influence 62
business angel networks (BANs) 61–2, 65, 71
business angels, average 470, 000 euros available for investment 65
can act as ‘love money’ investors by financing friends and family ventures 68

criticized for not being objectively rigorous in analyses and selection 169

ideally would invest 100, 000 euros in a single project 66

individuals who have access to investment opportunities 64

investment process of 63–4 must be able to assess the risk opportunities 63

not a panacea when dealing with technology-driven new ventures 67

rarely retired or idle 66

source of finance for young and innovative companies 60

business development capabilities 144–5

business development managers (BDMs) 136

buy-out see BO

Capella 105–6, 109–10, 114

capital flows between GP and LPs, tend to be sticky 51

capital investments, overshooting (undershooting) in PE industry due to herding behaviour 54

capital-seeking companies, investor is a stranger 64

CBVCs, beneficial and pivotal in decreasing liabilities of foreignness 108

contributions of 109–10

costs stemming from participation of 111

decrease liabilities of foreignness that their portfolio companies face 104

internationalization of seven ventures 104

model of role in internationalization of their portfolio companies 113, 115

provide some form of endorsement to a venture 107

several in the data have exercised persuasion or coercion 105

CEOs, benefit from promoting track record of how they communicate with investors 128

‘certification effect’ of degree 96

Cisco 165, 174

Clarysse, B. 16, 144
classical business angels 63

classic USO, ‘financing gap’ with regard to classic venture capital shows little sign of narrowing 178

cognitive schemas 78–80, 89

Cohen, W.M. 121

commercial opportunities, new technology and 167–8

commitment, influences’s willingness to accept value that the VCF can add 122

role of VCF 126–7

VCF’S to PFC 128

commitment on investment outcomes, mechanism slightly different from that for communication 121–2

communication 121–4, 128

competitiveness, most important goal based on linkages 87, 89

conjoint analysis 17

consistency, key question for majority of investors 11

contact networks of founders and employees, young firm’s exchange relationships and 103

Continental European market, 16 later-stage PE investors 31

Continental European PE investors 32–5, 41–2

cross-border investors, increased transaction costs they bring 112

lower liabilities of foreignness 107–8

negative and positive effects for the portfolio firm 118

possess information on business environment in their location 108

potential disadvantages they bring 114–15

pressures on ventures to become similar to those operating in investor’s vicinity 117
cross-border venture capitalists see CBVCs

Dabhoklar, P.A. 78, 81
D’Andrade, R.G. 79–80
Danish business angels, majority have invested less than 10 per cent 60
declarative knowledge, connected to knowledge of focal issue 79
declarative and procedural knowledge, cognitive schemas where conscious deliberative decision making occurs 79
De Clercq, D. 120, 122
degree, considered critical qualification for founders in high-technology businesses 96
Diller, C. 43, 55
Dimov, D. 161
due diligence 10, 126, 129, 143, 170
IPR 145
Dutch BAN (NEBIB), angels in enterprises that offer mixture of sales and services 67
Dutch funds, generally found in people investors 24
early-stage equity finance, dearth of is contributor of ‘European paradox’ 163
early-stage high-tech funding, problems with perceived market failures 28
early-stage high-tech VCs, investment decisions 16
earnings conservation, alternative measure for earnings quality 39
earnings management, negatively related to the financial reporting quality 38
eBay 165
education beyond degree level, no effect on firm performance 95
education to degree level, positive effect on survival, profitability and growth 95, 100
education to degree level and to post-graduate level 91
Emilia Romagna region (Italy), laddering techniques applied to 91 entrepreneurs 83–4
‘ends’, valued states of being 78
Enterprise Resource Planning (ERP) implementation 34
entrepreneurial environment, involves managing (incubation and spin-out) programmes and 178, 182
entrepreneurial cultural inside university, long process, requires reorganization from bottom up 182
entrepreneurial firms, choice of VC investor needs to go beyond financial considerations 128
entrepreneurs, benefit from knowledge of what drives selection behaviour 28
give more attention to firm consequences in goal map 87
hierarchical relations among goals 84–5
how they attract PE investors’ attention 30–31
motives for engaging in PE financing 77
must be both proactive and savvy if seeking seed funds 174
over half seeking initial funding from VC likely to be refused 169
PE financing and behavioural research and ideas from business 89
searching for PE financing apply earning management techniques to boost results 38
trained to elaborate and present their business plan to investors 63
upgrade communication skills looking for finance and making ventures ‘investor ready’ 61
entrepreneurs’ cognitive schemas, frequencies observed by laddering technique 84
entrepreneurs and local investors, should try to attract cross-border investors 117
entrepreneurs, benefit from knowledge of what drives selection behaviour 28
give more attention to firm consequences in goal map 87
hierarchical relations among goals 84–5
how they attract PE investors’ attention 30–31
motives for engaging in PE financing 77
must be both proactive and savvy if seeking seed funds 174
over half seeking initial funding from VC likely to be refused 169
PE financing and behavioural research and ideas from business 89
searching for PE financing apply earning management techniques to boost results 38
trained to elaborate and present their business plan to investors 63
upgrade communication skills looking for finance and making ventures ‘investor ready’ 61
entrepreneurs’ cognitive schemas, frequencies observed by laddering technique 84
entrepreneurs and local investors, should try to attract cross-border investors 117
‘equity enhancement’ schemes, logic of 165
equity gap 164–5
equity-seeking mindset (‘equity culture’), can be fulfilled by
education system 72
ER-GENTECH, one of biggest
successes of genopole in Emilia-
Romagna region 183
Esposito, A. 62
Europe,
compared to US, informal
financing system is less
developed in 180
does more than support networks of
excellence and exchange of
good practices 183
greater syndication to cope with
smaller equity gap problem 65
imprecations by government not
likely to be welcomed by larger
funds or their LPs 174
lack of capacity of mainstream VCs
to assess potential of early-
stage ventures 64
lagging behind in number of patents,
gap between US and Japan
widening 175
large funds have migrated to large
later-stage deals in 163
link between wealth creation and
competitiveness in knowledge-
driven global economy 149
management buy-outs (MBOs)
162–3
not kept up with USA as
powerhouse of new technology
commercialization 162
researchers world leaders in many
areas of technological research
and development 175
returns among top three reasons to
invest 68
spin-out programmes characterized
by wide variety of institutional
contexts and cultural factors
179

  university-based knowledge and 150
  University Challenge Fund (UCF) 135–6
  university inventions, new way to create entrepreneurial ventures 135
University of Nottingham, spin-out process using systemization for greater efficiency 179–80
University of Nottingham Business Research Unit, ‘embeds’ technically trained business development executives in areas such as pharmaceutical sciences 180
university spin-offs, generally very small 178
university spin-outs see USOs
university technology transfer office (UTTO) 136, 138
  need expertise in area of IP protection 146
  need to develop investment opportunities for spin-outs 145
  number of staff in 144
  support in commercialization process and protection 155, 158
university technology transfer processes 143–5
US,
  about 36,000 companies receive angel finance every year 60
  business angels and institutional VCs 162
US-based venture capitalists (VCs), focused on venture capital industry as a whole 16
US government’s Small Business Investment Companies programme (SBIC) 165
USOs,
  data collected from 12 136
  dynamics of using in-depth semi-structured interviews with CEOs within UK 151
  formed by entrepreneurial academics not classical entrepreneurs 153
  growing doubts surrounding 149
  investors uncomfortable with licensed IPRs 139
  more like technology lifestyle ventures than entrepreneurial businesses 152
  more research needed on 159–60
  not major source of income compared to licensing and other
technology transfer activities 159
perceived as bearing greater risk 142
problem summarized by VC aiming to invest in 135
risks and problems of establishing should not be underestimated 150
shortage of finance can impede creation of successful 139–40
university-based knowledge and 150
VCs' attitudes and perception of risks associated with 141
US PE funds, average IRR of 17 per cent 47
US universities, always had to interact with private sector in order to survive and flourish 185
US venture capital industry, study of 31
value added, result of quality, quantity and management 120–21
role of VCF 127
Van Cauwenberge, T. 30
Van Eeckhout, C. 16
Van Osnabrugge, M. 5–6, 8
VC (venture capital), on aspects in health-care sector 124 informal largely undeveloped in Europe in comparison with US 60, 62
more likely when founder not previously involved in a start-up 93
most appropriate source of finance for NTBFs 91
VC backing, education important demand-side determinant of 95
VC and BO funds changes, intensity of deal competition 52
VC environment, fundamental, impacts on number of serial entrepreneurs and business angels 181
VC firms, criteria for decisions to invest 16
investment proposals to are eliminated in very short time 170
seed investing and degree which status and reputation facilitated or deterred 168
with strong reputation, sensitized to take more risk tolerant approach 169
VC firm's management teams, third study and 170
VCFs 120
commitment affects intensity of value-adding activities 127
function in an informal rather than formal way 126
identified problems in attracting VC for spin-outs and means of addressing problems 145
individuals within may hold varying levels of knowledge relevant to focal PFC 125
may use knowledge from its interaction with PFC to fill gaps in own knowledge 122–3
multiple general managers 124
often limited to data gathering during due diligence process 129
role of communication within 124–6 should ensure that universities understand their requirements 147
twenty-five most active investing in seed capital (1962–2002) 172
VC funds, entrepreneurial applicant cannot predict person who will appraise application 171
investors do not have access to the full population of young high-technology firms 101
longer in existence the more prepared managers are to make seed investments 166–7
objective and subjective criteria 9 often function of past success and reputation 5
processes utilized by LPs for investment in 6, 9, 13–14
size of is function of past success and reputation 5
VCF value added, will increase PFC performance 121
VC industry, ideal recruit has technical degree plus an MBA 64
VC market, lack of training of investors 63
VCs (venture capitalists), appraisal of management teams and or ‘gut instinct’ 100
attract investment by fund performance and ‘reputation’ 5
classified based on their sources of capital 6
downplay formal qualifications 100
emphasize on the protectability and the uniqueness of the technology 19
factors leading to rejection of investment proposals 138, 140
financial intermediaries 14
formalized data collection, information gathered during due diligence process 126
frequently held as exemplars of professionalism 169
graded using a matrix system 9
heterogeneity in investment selection behaviour 27
how they learn depends on integration of skills and knowledge among colleague investors 121
interviews with indicate fruitful interactions between VCF and PFC 123
knowledge of legal issues is a special domain 108
like to back strong teams 93
may become more committed to some PFCs compared to others 127
may increase their reputation among their peers and entrepreneurs 129
need entrepreneurs to generate a return 3
often invest with other private equity to decrease risk and benefit from syndication 125
only going to invest in small proportion of projects that meet their stringent criteria 178–9
provide non-financial value added to their portfolio ventures 103–4
role of 4
sample of European 18
swung back towards traditional technology companies (including spin-outs) 178
VCs selection criteria, financial criteria, exit opportunities and product/service characteristics 16
VC techniques, buying in professional advisory services and insisting on performance-related milestones 182
venture capital firms see VCFs
venture capital funds on back of dot.com bubble, investment sizes driven up 178
venture capitalists see VCs
Venture Economics’ database 130
virgin business angels 60, 68–9, 71–2
