## List of tables

2.1 Selected websites containing information about geographic data sources 46  
2.2 The present non-user’s benefits of preserving the present condition of Broadland aggregated across the UK using various procedures 60  
2.3 Regression models relating official counts of visitors to woodland sites to predictions of the number of visitors obtained from GIS-based analyses 70  
3.1 Indonesia’s PROPER results, 1995–97 101  
3.2 The Philippines’ EcoWatch results, 1997–98 101  
3.3 China’s GreenWatch results, 1999–2000 102  
3.4 Performance rating programs: changes in compliance status 103  
5.1 Life-cycle emissions for gasoline-fuelled cars with respect to fuel production, vehicle production and in-service use 209  
5.2 Transport and economic trends in Europe, 1970–2000 211  
5.3 International comparison of transport figures, including CO$_2$ emissions 213  
5.4 Environmental effects of transport 215  
5.5 Examples of noise management policies in transport 217  
5.6 Vehicle pollution emissions 218  
5.7 Contribution of mobile versus non-mobile sources to pollution, USA 220  
5.8a Average emissions of CO$_2$ and NO$_x$ per traveller-km per transport mode; urban transport, 2000, the Netherlands 222  
5.8b Average emissions of CO$_2$ and NO$_x$ per traveller-km per transport mode; medium-distance transport, 2000, the Netherlands 222  
5.9 Average versus marginal environmental costs of public transport during the peak and off-peak period 225  
5.10 Life-cycle greenhouse gas emissions for alternative fuels 227  
5.11 Comparison of valuation methods used in the field of transport and the environment 230  
5.12 Examples of policy instruments for containing the environmental intrusion of transport 235  
5.13 The shares of transport modes in passenger transport in various countries 243
