Preface

The translation of the principle of sustainable development into policy and practice, and the evaluation of the outcomes of these strategic interventions, are some of the most pressing challenges facing policy makers in Europe and beyond. The chapters in this volume contribute to the debate on these issues by exploring the conceptual and methodological issues relating to the evaluation of sustainable development, and by analysing European practice and experience.

The chapters were first presented at an international conference entitled 'Impact assessment for a new Europe and beyond', which was held at the University of Manchester, as part of a series of conferences and training courses (EASY-ECO 2005-07) supported by the European Commission's Marie Curie Initiative under the 6th Research Framework. The conference was also supported by the United Nations Environment Programme. The University of Manchester's School of Environment and Development (SED) is a co-partner in the project, which is led by the Vienna University of Economics and Business Administration, Austria. The other co-partners are the International Institute for Sustainable Development (IISD), Canada; the Centre for Evaluation, Saarland University, Germany; the Regional Environmental Centre (REC), Hungary; the Regional Environmental Centre, Slovakia; the Sendzimir Foundation, Poland; and the National Centre for Sustainable Development (NCSD), Romania.

We are grateful to the European Commission and UNEP for supporting the conference that led to the final production of the chapters in this volume. Nevertheless, the views and conclusions expressed by the authors are entirely their own and should not be attributed to the conference sponsors.

We are grateful to the contributing authors for making available to us their original papers and for agreeing to revise the papers for publication in this volume; also to our colleagues at the Vienna University of Economics and Business Administration for having invited us to contribute this volume to the Evaluating Sustainable Development Series. We also owe a large debt of gratitude to our colleagues in the School of Environment and Development at Manchester University for their assistance. Debra Whitehead, Lyn Currie and Marion Fahy were responsible for organizing the conference and for the administrative and financial management of the

project, and Serban Scriciu, Lindsay Stringer and Jennifer Franz provided us with excellent support in preparing the papers for publication.

Finally, we thank the commissioning and editing staff at Edward Elgar for their patience, encouragement during the preparation stage and for their efficiency in the preparation of the manuscript for final publication.
