technological possibilities, sustainable energy (case studies) 112, 134
technology system changes 12
technology(ies)
extended level playing field 47–8
selection environment 25
sustainable energy supply 50
TEXTOR fusion experiment 118
thermodynamic efficiency 25
thin film PV technology 123, 129, 133
Third Policy Document on Energy 85–6
third-generation fuel cells 103
time horizons 48, 93–4
see also limited time horizons
tokamak 116
torus 116
total factor productivity (TFP) 16
Thematic Strategy on the prevention and recycling of waste (EU document) 93
Thematic Strategy on the sustainable use of natural resources (EU document) 93
transferability 8
transition management
evolutionary economics 65–6, 142–5, 149–50
sustainable energy see sustainable energy supply
transition policy
adaptation to changing circumstances 53
care in early phase 142
Netherlands 69–101
purposeless evolution 48–9
stimulation/management of learning processes 38
see also environmental policy,
extended level playing field
transitions 37–8
neoclassical economic view 41–2
scientific research into 52
to sustainable energy 59–60, 62–4
transmission mechanisms, optimizing behaviour 8
transportation, fuel cell technology 107
triple product, nuclear fusion 116
TRIPS Treaty 82
ultimate micro approach 4
uncertainty 8, 12, 18, 23, 54
underconnection 15
United Kingdom, renewable energy sector 97
United States, fuel cell research 106
variability 149, 150
variation 20–21, 22, 143
see also diversity
Veblen, T. 6
venture capital 23, 90, 91, 120

waste/wastage 21, 22
weak competition, selection pressure 8
Westinghouse 106

windmill, invention of 22
Winter, S.G. 9, 10, 11, 14, 16

zero energy tax rate, Netherlands 129
zero-emission vehicles 107, 112, 115
